

The Governor's
Economic
and
Demographic
Report

2006-2007

Kansas Division of the Budget

January 2007

Acknowledgements

The Governor's Economic and Demographic Report 2006-2007 was prepared under the general direction of Duane A. Goossen, Director of the Budget.

This report was written by Dr. John D. Wong, Professor of Public Administration, Hugo Wall School of Urban and Public Affairs, Wichita State University and Ann H. Durkes, Principal Budget Analyst/Tax Policy and Demographics, Division of the Budget.

Publication coordination and editing were provided by Louis S. Chabira, Deputy Director; Ann H. Durkes, Principal Budget Analyst/Tax Policy and Demographics; Jeff Arpin, Principal Budget Analyst; and Shelly Dechand, Accountant.

Readers of *The Governor's Economic and Demographic Report* can access this information on the Kansas Division of the Budget's website at <http://budget.ks.gov>.

2006 U.S. Economic Review

November marked the fifth anniversary of the beginning of the current economic expansion. The U.S. economy continued to expand at a moderate rate during 2006, even though it suffered a temporary setback resulting from energy price spikes in August and September. This sharp rise in energy prices had a negative effect on the purchasing power of households and raised business costs. The increases in energy-related materials and shipping costs also significantly affected profit margins for manufacturers and retailers. On a positive note, the U.S. probably is less vulnerable to this year's oil price shock than it was to the shocks of the 1970s and early 1980s because energy represents a smaller share of household purchases now than it did in the 70s and 80s. In addition, energy's proportion of business input costs is lower now than it was in those earlier periods. Another positive point is that despite the substantial rise in oil prices, core consumer prices rose at only a moderate pace.

Nevertheless, with the U.S. economy expanding and unemployment declining, the Federal Reserve continued to increase the federal funds rate in an attempt to circumvent potential inflationary pressures. These rate increases were motivated in part by rising crude oil prices, which surged to nearly \$75 per barrel during mid-summer before retreating to the \$60 per barrel range toward the end of the year. Conditions contributing to higher energy prices include overseas production uncertainties in the Middle East and elsewhere, as well as strong demand from China and India.

Housing has played a significant role in the recent slowing of overall economic activity too. Developments in this sector are likely to have an important influence on economic growth going forward as well. The slowdown in the housing market follows a housing boom that persisted for most of the first half of this decade. Between 2000 and late 2005, the rate of construction of single-family homes rose more than 40.0 percent, and sales of both new and existing homes

increased by a similar amount. The recent slowing in the housing market was an unavoidable consequence of the robust growth during the first half of the decade. However, notwithstanding the sharp reduction in starts of new single-family houses, inventories of both new and existing homes for sale have increased markedly this year. Although residential construction continues to sag, some indications suggest that the rate of home purchases may be stabilizing. This steadying of the market may be in response to modest declines in mortgage interest rates over the past few months and lower prices in some markets.

In 2006, motor vehicle sales also experienced a slow down that was the result of weaker demand and an accompanying buildup in stocks of unsold cars and trucks. Energy prices contributed to these developments. In short, consumers responded to higher gasoline prices by reducing their demand for less fuel-efficient vehicles such as sport-utility vehicles (SUVs) and trucks. The decline in sales of these vehicles caused inventories to accumulate, resulting in auto-makers significantly reducing production.

Although there have been "drags" on the economy, overall the economic trends appear to be positive. As shown in Table 1-1, which presents major U.S. economic trends for 2006 and the forecast for 2007,

Table 1-1

Major U.S. Economic Trends 2006 & 2007	2006	2007
	GDP Growth (\$ Constant)	3.4 %
Personal Income Growth (\$ Current)	6.8	5.4
Consumer Price Index Increase (CPI-U)	3.4	2.6
Unemployment Rate (Monthly Average)	4.7	4.9

real GDP continues a general upward trend, while personal income continues to show strong upward growth. The Consumer Price Index for All Urban Consumers (CPI-U) shows stable yearly increases for the last several years. The only rather large increase occurred in 2005 when it jumped by 5.3 percent. This

was the highest rate of increase since 1992 when the CPI-U increased by 4.2 percent. The unemployment rate also is showing a definite downward trend, which indicates strength in the economy.

Employment data are important when analyzing the economy. The initial datum derived is the civilian labor force, which is based on a sample survey of households. Once the civilian labor force is determined, then employment, unemployment, and the unemployment rate are derived. The civilian labor force includes those who are at least 16 years old and either employed or looking for employment. Military personnel, retirees, children, and those not actively seeking work are not included. In 2006, the labor force grew 1.3 percent, the same growth rate as in 2005. This is the highest growth rate since 2000 when the labor force increased 2.3 percent. Figure 1-1 shows the U.S. civilian labor force growth rate from 1970 through 2006.

Figure 1-1:

The level of employment is the number of individuals in the civilian labor force who are employed. In 2006, employment in the U.S. increased by 1.4 percent. This employment level compares with a 1.8 percent increase in 2005 and a 1.1 percent decrease in 2004. Figure 1-2 presents the U.S. employment growth rate from 1970 through 2006.

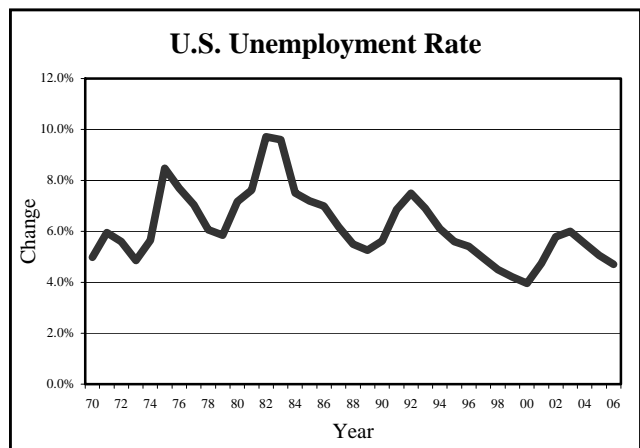

The unemployment rate is expressed as a percentage of the number of people unemployed to the total number of people in the labor force. In 2006, the unemployment rate stood at 4.7 percent, the lowest rate since 2001. In 1992, the unemployment rate was 7.5 percent. Since that time, the unemployment rate in

Figure 1-2:

the U.S. steadily declined every year through 2000. At that time, the unemployment rate was 4.0 percent. Then in 2001, the unemployment rate increased to 4.7 percent. Subsequently, the unemployment rate soared to 5.8 percent in 2002, which was the largest increase since 1991. In 2003, it increased further to 6.0 percent, then dropped back to 5.1 percent in 2005. Figure 1-3 shows the U.S. unemployment rate from 1970 through 2006.

Figure 1-3:

Inflation is another important economic indicator. In general, inflation is the increase in the price of a given “market basket” of goods. Inflation can be measured in several ways. However, the most commonly used measurement is the Consumer Price Index. This index was first constructed during World War I as a basis for adjusting shipbuilders’ wages, which were under government control during the war. In this report, the CPI-U is used because it is reflective of the typical

urban consumer's purchases and is the most commonly used measurement. In 2006, the rate of inflation, as measured by the CPI-U, increased by 3.4 percent compared to a 3.5 percent increase in 2005. Figure 1-4 shows the CPI-U from 1970 through 2006.

Figure 1-4:

Gross Domestic Product

Gross domestic product, or GDP, is the value of final goods and services produced within the country during a given year. GDP is measured both in real terms and in nominal terms. Nominal GDP is the dollar value of the final goods and services, while real GDP is the value of the final goods and services as adjusted for price changes (inflation) that occurred over the course of that year. Figure 1-5 presents U.S. gross domestic product growth from 1970 through 2006.

Figure 1-5:

U.S. nominal GDP increased at a 6.5 percent rate in 2006 compared to a 6.3 percent rate in 2005 and a 6.9 percent rate in 2004. Real GDP grew by 3.4 percent in 2006, compared to a 3.2 percent increase in 2005 and a 3.9 percent increase in 2004. Figure 1-6 presents the

Figure 1-6:

annualized quarterly growth rate for the U.S. real GDP from the first quarter of 2000 through the fourth quarter of 2006. Real and nominal GDP in 2005 and 2006 are shown in Table 1-2.

Table 1-2

	Real 2006	Percent Change	
		2004-2005	2005-2006

There are five major categories of GDP: consumption, investment, exports, imports (exports and imports constitute international trade), and government spending.

Consumption. The largest component of GDP is consumption, or consumer spending. Changes in consumer spending are affected by a variety of factors, including personal income, the savings rate, debt accumulation, discretionary income, and consumers' confidence in the economy. Consumer discretionary income was significantly affected by the spike in the cost for gasoline in 2006. Although prices have fallen recently, prices during the late summer and early fall were significantly higher than a year ago.

In 2006, real (adjusted for inflation) consumption increased by 3.1 percent, compared to a 3.5 percent increase last year. The overall increase in real consumer spending was led by a 4.9 percent increase in purchases of durable goods, or those with an expected useful life of more than one year. Nondurables are goods with an expected useful life of one year or less. Expenditures on nondurable goods increased by 3.5 percent in 2006 compared to a 4.5 percent increase in 2005. Table 1-3 presents U.S. real personal consumption expenditure growth for 2005 and 2006.

Table 1-3

	Expenditures	
	2005	2006
Personal Consumption	3.5 %	3.1 %
Durables	5.5	4.9
Nondurables	4.5	3.5
Services	2.6	2.6
Retail Sales & Food Services	7.2	6.6
Ret. Sales & Food Less Autos	8.2	3.5
Bldg. Mat., Equip., & Supplies	10.3	10.3
General Merchandise	6.1	5.5
Food & Beverage Stores	5.0	4.6
Clothing & Accessories	6.1	6.7
Food Serv. & Drinking Places	6.8	8.4

Source: Moody's Economy.com

Overall, expenditures on services grew by 2.6 percent, the same rate as in 2005. Most noteworthy in the services category are housing expenditures. These

rose by 2.4 percent in 2006, which is slightly lower than the 2.9 percent increase in 2005. Within the housing category, expenditures for building materials, equipment, and supplies increased by 10.3 percent. Much of this increase was driven by rebuilding in the Gulf areas that were affected by last year's devastating hurricanes. In other categories, increased spending was realized in food and drink from restaurants, etc. (8.4 percent) and from stores (4.6 percent). Increases also occurred in expenditures for general merchandise (5.5 percent), as well as clothing and accessories (6.7 percent). Retail sales and food services expenditures also increased (6.6 percent), but retail sales, excluding automobile sales, did not realize as large an increase (3.5 percent).

Business Investment. Capital investment has continued to expand at a reasonable rate. Spending on nonresidential construction has been particularly strong, reflecting higher outlays for new office and commercial buildings, as well as a rapid increase in expenditures on drilling and mining structures. Outlays for equipment and software have slowed somewhat, though backlogs for "on order" capital goods, such as industrial machinery and other types of heavy equipment, remain high. Moreover, financial conditions continue to be favorable for investment spending because profitability is high, the cost of capital is relatively low, and significant cash reserves remain on firms' books.

In real terms, overall investment increased by 4.7 percent in 2006 following a 5.4 percent surge in 2005. Specifically, fixed investment increased 3.6 percent. Nonresidential investment rose dramatically (7.8 percent), while residential investment decreased 3.4 percent and inventories surged 134.5 percent.

International Trade. In 2006, real imports increased by 6.5 percent following a 6.1 percent increase in 2005. During that same period, real exports increased by 8.7 percent in 2006 following a 6.8 percent increase in 2005. The result was that real net exports recorded an increasing trade deficit of over \$600.0 billion in 2006.

Government Expenditures. Real government spending increased by 2.0 percent in 2006 compared to a 0.9 percent increase in 2005. Specifically, federal government expenditures increased 1.7 percent in 2006, which is slightly more than the 1.5 percent

increase experienced in 2005. Within the federal government category, national defense expenditures increased 1.2 percent in 2006 compared to a 1.7 percent increase in 2005, and non-defense expenditures increased 2.8 percent in 2006 compared to a 1.1 percent increase in 2005. At the state and local government levels, expenditures increased at a 2.1 percent rate in 2006 compared to a 0.5 percent increase in 2005.

Personal Income. Personal income is the dollar value of income available to households for consumption expenditures. Total personal income is derived by summing salaries and wages, other labor income, proprietors' income, rental income, personal dividend income, personal interest income, and transfer payments. From this sum, personal contributions for social insurance and personal taxes are deducted. In 2006, personal income increased by 4.0 percent, which is a healthy increase over the 2.3 percent growth rate experienced in 2005. Figure 1-7 presents U.S. personal income growth from 1970 through 2006.

Figure 1-7:

Rental income increased 0.2 percent in 2006, compared to a 42.7 percent decline in 2005, while dividend income surged 10.7 percent compared to a 7.0 percent surge in 2005. Interest income in 2006 increased 8.6 percent, following a 6.1 percent increase in 2005.

Disposable personal income is personal income less personal taxes. Disposable income increased 3.1 percent in 2006 compared to a 1.2 percent increase in 2005. Median household income increased 4.5 percent in both 2005 and 2006. Table 1-4 presents U.S.

personal income composition and growth from 2005 to 2006.

Table 1-4

	U.S. Personal Income Growth, 2005-2006 (Dollars in Billions of Chain Weighted 2000 Dollars)		
	2006*	Percent Change	
		2004-2005	2005-2006
Median Household Income	48,405	4.5 %	4.5 %
Personal Income	9,500.0	2.3	4.0
Disposable Income	8,400.0	1.2	3.1
Dividends	636.0	7.0	10.7
Interest	1,000.0	6.1	8.6
Rent	72.9	(42.7)	0.2
Personal Saving Rate (%)	(0.4)	(2.4)	--

* Estimated

Source: U.S. Department of Commerce, Bureau of Economic Analysis, and Moody's Economy.com

Personal Savings. Personal savings is derived by subtracting personal outlays from disposable personal income. The personal savings rate is personal savings expressed as a percentage of disposable personal income. In 2006, the personal savings rate was -0.4 percent, which is the same rate as in 2005.

Inflation & Prices. Overall inflation has slowed significantly since mid-year. This improvement is largely the result of the recent declines in energy prices. The price of crude oil has fallen nearly 25.0 percent since its recent peak. However, the core inflation rate, the rate of inflation excluding the energy and food components, remains relatively high. Several factors underlie the increase in core inflation over the past year. The sharp increases in energy and materials costs contributed to the rise in core inflation because some suppliers of non-energy goods and services may have been able to pass their higher input costs into final prices. Increases in housing costs also boosted core consumer inflation over the past year.

Inflation can be measured using several methods. Two specific methods are the Consumer Price Index for All Urban Consumers (CPI-U) and the Gross Domestic Product (GDP) Price Deflator. In general, inflation has been less than 4.0 percent since 1992. In 2006, inflation, as measured by the CPI-U, remained relatively modest. The inflation rate for 2006 was 3.4 percent, while inflation in 2005 was 3.5 percent. More specifically, the cost of food less energy increased 2.6

percent in 2006 compared to 2.2 percent in 2005. The cost of shelter increased 3.4 percent in 2006 compared to 2.6 percent in 2005, and the cost of food generally increased 2.4 percent in both 2005 and 2006. The cost of food away from home specifically increased 3.1 percent in 2006 compared to 3.2 percent in 2005. Finally, the cost of medical care increased 4.2 percent in both 2005 and 2006. During that same time frame, inflation, as measured by the GDP Price Index, stood at 3.0 percent in both 2005 and 2006. Table 1-5 presents the seasonally adjusted percent change for U.S. consumer prices for 2005 and 2006.

Table 1-5

U.S. Consumer Prices Percent Change, Seasonally Adjusted, 2005-2006			
	Prices		
	2005	2006	
GDP Chain Price Deflator	3.0 %	3.0 %	
Consumer Price Index	3.4	3.5	
Less Food & Energy	2.2	2.6	
Shelter	2.6	3.4	
Food	2.4	2.4	
Food Away from Home	3.2	3.1	
Medical Care	4.2	4.2	

Source: Moody's Economy.com

Productivity. One major factor contributing to holding inflation in check in recent years has been strong productivity growth. Productivity growth, as measured by output per hour, increased only 1.8 percent in 2006, compared to a 2.3 percent growth rate in 2005. This is not cause for alarm, but it does bear watching.

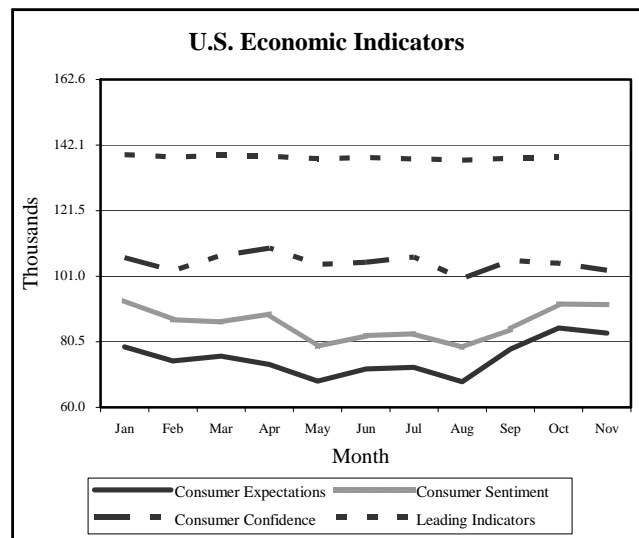

2007 U.S. Economic Outlook

By most measures, the economy has been performing satisfactorily. However, persistently high oil prices combined with several months of modest job growth have raised questions about the strength and the durability of the economic expansion. These concerns are tempered because consumer spending growth is likely to be sustained through 2007 even if holiday retail sales are mediocre. In addition, the economy now appears to be on course for a sustained period of expansion at a moderate pace. For 2007, the economy appears likely to expand at a moderate rate that is

close to or slightly below the economy's long-run sustainable rate. Core inflation is expected to slow gradually from its recent level, reflecting the reduced impetus from high prices for energy and other commodities, and contained inflation expectations. It is possible that further reductions may occur in the rate of increase of housing costs. Also, some easing in the pressures on capital and labor resources may happen. However, the slowing pace of residential construction is likely to be a drag on economic growth into 2007.

Four commonly cited predictors of future economic performance are the Composite Index of Leading Economic Indicators, the Consumer Confidence Index, the Index of Consumer Sentiment, and the Index of Consumer Expectations. Figure 1-8 presents these indices for 2006.

Figure 1-8

The Composite Index of Leading Economic Indicators and the Consumer Confidence Index are compiled by the Conference Board, which is a private, not-for-profit organization that conducts business and economic research and forecasting. The Composite Index of Leading Economic Indicators is a composite index of ten leading economic indicators that reach cyclical turning points before the actual turning point occurs in the economy as a whole. Each series included in the Composite Index of Leading Indicators is selected because of its performance on six important characteristics, including economic significance, statistical adequacy, timing consistency at business cycle peaks and troughs, conformity to business expansions and contractions, smoothness, and prompt availability.

The Index of Consumer Sentiment and the Index of Consumer Expectations are compiled by the Survey Research Center at the University of Michigan. These indices focus on how consumers view prospects for their own financial situation, how they view prospects for the general economy over the near term, and their view of prospects for the economy over the long term.

The underlying economy appears to be on reasonably stable ground. While the overall inflation rate during 2006 was higher than expected, the difference was almost entirely a result of higher energy prices. Excluding food and energy, the core CPI increased 2.6 percent during 2006. Inflation forecasts for the CPI and the GDP price index show overall inflation resuming a lower trend in 2007.

Through August, the Consumer Expectations and Consumer Sentiment Indices drifted downward. However, the indices rebounded in September and October, only to fall back slightly in November. The Consumer Confidence Index is based on the Consumer Confidence Survey, which is compiled from a representative sample of 5,000 U.S. households. This index fell to 102.9 in November, the lowest level since August, when the reading was 100.2. The November value was up from 105.1 in October. The drop in the Conference Board's Consumer Confidence Index raised concerns that consumer spending might not be as robust as previously anticipated during the holiday season, despite its upbeat start. Reports show that at the beginning of the holiday season, discounters and electronic retailers fared well. Their success was driven by the release of video gaming devices, such as Sony's PlayStation 3 and Nintendo's Wii. Finally, the Index of Leading Economic Indicators has remained relatively flat during the course of the year. Thus, no major changes, positive or negative, appear to be imminent on the economic horizon.

Real GDP is expected to grow at a 2.9 percent rate in 2007. Total nonfarm employment growth is expected to decrease from the current 1.4 percent rate to 1.0 percent in 2007. Productivity, as measured by output per hour, is also expected to slow from 2.4 percent to 2.2 percent. Growth in business investment spending by firms was 4.7 percent in 2006 and is expected to decrease to 2.9 percent in 2007.

The unemployment rate is expected to increase slightly from 4.7 percent in 2006 to 4.9 percent in 2007.

Nominal personal income also is forecasted to increase in 2007 (5.4 percent) compared to 2006 (6.7 percent). Even though inflation in 2006 was well above the level forecast at the start of the year, inflation is expected to remain modest for 2007. The CPI is expected to increase by 2.6 percent in 2007 as oil prices remain near \$60 per barrel through 2007.

Overall, the economy is likely to expand at a moderate rate in 2007. Economic growth is expected to be slightly above the long-run trend in the near term, but it is expected to return to a rate that is generally consistent with the growth rate of the economy's underlying productive capacity. This scenario assumes that consumer spending will continue to grow near its trend rate and that the drag on the economy from the motor vehicle and housing sectors will gradually dissipate over time. The effects of the housing correction on real economic activity are likely to persist into early 2007, but the rate of decline in home construction should slow as the inventory of unsold new homes is gradually absorbed.

Gross Domestic Product

The robust growth in the U.S. economy prior to the recent downturn was driven by strong consumer spending that resulted from rapid growth in stock market wealth. Compared to the early 2000s, the stock market was markedly less volatile in 2006 with the Dow-Jones Industrial Average hitting record highs and staying above the 12,000 level for much of the year. However, high energy prices, rising interest rates, and continuing international uncertainty may keep the stock market somewhat subdued in 2007. Table 1-6, which is shown at the top of the next page, presents the nominal and the real U.S. GDP composition and growth estimates for 2006 and the forecasts for 2007.

Consumption. Consumer spending has continued to expand at a strong rate. During the 2001 recession and subsequent recovery, consumer spending continued to expand in spite of the economic slowdown. Immediately following the recession, consumer spending was motivated primarily by tax cuts and low interest rates. Now growth in consumer spending seems to be driven more by stronger business activity in the form of greater job growth and rising household incomes. Continuing this transition is the key to sustaining the economic expansion. However, interest

Table 1-6

rate increases, employment trends, and high gasoline prices may cause consumer spending growth to slow significantly during 2007. Crude oil prices have more than doubled since 2002. Natural gas and home heating oil prices also rose dramatically. According to the Department of Energy, the average U.S. household spent \$928 for home heating in 2006, slightly less than in 2005 when the amount spent was \$947.

Overall, real consumption growth is projected to slow from 3.1 percent in 2006 to 2.7 percent in 2007. Since the last recession in 1991, consumer spending has consistently increased at a more rapid rate than disposable income. The result was that the savings rate fell. The decline implied that most of the spending growth over this period was driven by capital gains and/or consumer credit. In the latter half of the 1990s, the low savings rate did not appear to be a severe problem because stock market investments were not only sustaining, but enriching many households. However, the stock market correction in

2000 ended this trend. Currently, the low savings rate combined with a high debt level indicates that many consumer budgets are tight. The personal savings rate is expected to increase slightly from -0.4 percent in 2006 to 0.3 percent in 2007. Table 1-7 presents U.S. personal consumption expenditure growth estimates for 2006 and the forecasts for 2007.

Energy prices are a key component to continued slow growth in consumer spending. These prices will have a pronounced effect on big ticket and durable goods purchases because there will be less to spend on the bigger items. Moreover, higher interest rates will further reduce the cash infusion into the economy that has resulted from refinancing home mortgages in the past. Higher interest rates also will slow overall residential investment.

During the unprecedented economic expansion of the 1990s, a tight labor market and low inflation allowed consumers to realize significant gains in real purchasing power. Now, however, those particular circumstances are not present. The result is that real disposable income is expected to increase by 3.6 percent in 2007, compared to 3.1 percent in 2006. Real consumer spending growth is expected to drop back slightly to 2.7 percent in 2007 after a 3.1 percent increase in 2006. This trend will be supported largely by a 3.6 percent increase in services consumption.

Consumption of durables is expected to increase by 0.9 percent in 2007 compared to a 4.9 percent increase

in 2006. Automobile purchases are expected to decrease 1.1 percent in 2007, which is the same rate as in 2006. Within the durable goods category, the key growth sector in recent years has been electronics. Expenditures for nondurable goods are forecasted to increase 2.0 percent in 2007, which is lower than the 3.5 percent increase in 2006. Expenditures for services also are forecasted to increase by 3.6 percent in 2007 compared to a 2.6 percent increase in 2006.

More specifically, expenditures for food services and drinking places is expected to increase 8.6 percent in 2007, while clothing and accessories expenditures are expected to increase 6.4 percent. Increases are expected also in general merchandise expenditures (4.9 percent), as well as retail sales and food services (4.2 percent). Retail sales and food excluding automobiles are expected to increase 3.6 percent. Other expenditure categories forecasted to increase include food and beverage (2.3 percent) and building materials, equipment, and supplies (0.5 percent).

Business Investment. Business investment spending also has showed signs of renewed strength. This is in contrast to the sharp decline in business investment that was partially responsible for the 2001 recession and the subsequent slow recovery. Businesses now seem poised to reenter the market for items ranging from high-tech equipment and software to warehouses and equipment. These investments seem to be allowing businesses to position themselves for greater efficiency and greater productive capacity in the future.

The inventory surge in 2006 signals a production decline in 2007. In addition, rebuilding from the Gulf hurricanes is expected to continue during 2007. Thus, the residential “bubble” may not be as serious as originally feared. According to Freddie Mac, inventories of unsold new homes have begun to drift down from their July peak after having risen nearly 25.0 percent over the previous year. In addition, the National Association of Homebuilders’ Survey of Consumer Traffic turned upward in October and November amid anecdotes that current conditions are beginning to draw potential buyers back into the market. Freddie Mac expects housing markets to stabilize some time during the first half of 2007.

For 2007, real business investment spending is expected to increase to a 2.9 percent growth rate

compared to a 4.7 percent growth rate in 2006. The composition of growth will change also as spending shifts from equipment to structure. Real fixed investment is expected to rise 3.1 percent; nonresidential investment is forecasted to increase 7.4 percent; and residential construction is expected to decrease 5.8 percent in 2007. Within nonresidential investment, spending on structures should rise 13.3 percent, while spending on equipment should rise 5.7 percent.

International Trade. In 2007, oil prices may continue to be a significant drag on many world economies. However, the global economy continues to be strong. This growth in international markets should support the continuing expansion of U.S. exports of goods and services.

Real trade exports are expected to increase by 6.8 percent in 2007 compared to an 8.7 percent increase in 2006. Meanwhile, real trade imports are expected to increase 4.6 percent in 2007 compared to a 6.5 percent increase in 2006. Given these increases, the real trade deficit is likely to remain over \$600.0 billion in 2007.

Government Expenditures. Although projected deficits are not as high, relative to GDP, as the 1983-record setter, there is concern that the deficits are large and are likely to persist indefinitely. The most likely consequences are accelerating inflation, rising interest rates, private capital formation being crowded out by government borrowing, and slower GDP growth.

In real terms, government expenditures are estimated to increase by 1.4 percent in 2007. However, total federal government expenditures are estimated to decrease by 0.3 percent. Specifically, national defense expenditures are expected to remain constant, and non-defense expenditures are expected to decrease by 1.0 percent. Real state and local government expenditures are forecasted to increase 2.4 percent.

Personal Income. In 2007, real personal income in the U.S. is forecasted to grow at a 3.2 percent rate. Increases also are anticipated in personal interest income (10.0 percent), personal dividend income (6.4 percent), and disposable personal income (3.6 percent). However, rental income is expected to decrease (4.9 percent). The median household income is expected to increase 3.1 percent to \$49,928 in 2007. Table 1-8 on the next page presents the categories of U.S. Personal Income Growth for 2006 and 2007.

Table 1-8

U.S. Personal Income Growth, 2006-2007 (Dollars in Billions)			
	2006*	2007**	Percent Change
Median Household Income	48,405	49,928.0	3.1 %
Personal Income	9,500.0	9,800.0	3.2
Disposable Income	8,400.0	8,700.0	3.6
Dividends	636.0	676.6	6.4
Interest	1,000.0	1,100.0	10.0
Rent	72.9	69.3	(4.9)
Personal Saving Rate (%)	(0.4)	0.3	0.7

* Estimated
** Forecasted

Source: U.S. Department of Commerce, Bureau of Economic Analysis and Moody's Economy.com

Personal Savings. The rate of personal savings is expected to increase to a rate of 0.3 percent in 2007. This increase will move the personal savings rate into "the black" from its -0.4 percent rate in 2006.

Inflation & Prices. As productivity growth returns to more modest levels, unit labor costs are likely to rise, which will put upward pressure on prices. Moreover, continuing high prices for oil and other commodities will exacerbate inflationary pressures, as producers try to pass on their higher input costs to consumers.

In short, energy prices may continue to be a drag on the economy. The recent surge in oil prices is the result of a combination of fundamental changes in petroleum markets and fears about supply disruptions. Since mid-2003, growth in the demand for oil has far outstripped growth in supply. Compounding the fundamental oil market price pressures are fears over supply disruptions. High oil prices are likely to persist because there are virtually no immediately available incremental supply sources outside of the Organization of Petroleum Exporting Countries (OPEC). Capacity has not increased significantly in recent years because of a relatively limited level of exploration. Oil companies have not been convinced that high oil prices will be sustained. Moreover, many places with potential exploration opportunities are plagued by political instability, terrorism, and/or stifling government bureaucracies. Saudi Arabia, Iran, Iraq, Nigeria, Venezuela, Russia, and Indonesia have not been reliable sources for increased production.

Sectors that will be particularly hard hit by high oil prices include airlines, other transportation services, utilities, the chemical industry, and heavy manufacturing. However, the run up in oil prices has had a surprisingly limited effect on overall inflation. During 2006, the core inflation rate, which includes all sectors except food and energy, rose at a modest 2.2 percent annual rate. The overall inflation rate was 3.4 percent. This is, in part, a result of the U.S. presently requiring approximately only one-half as much oil to generate \$1.00 of GDP as was required in the mid-1970s. This means that for any given increase in the price of oil, the effect on the U.S. economy is approximately one-half of what it was in the 1970s.

One important question about inflation is the extent to which businesses will pass through to consumers the recent energy costs increases. If they do, core inflation will rise. Unless energy costs continue to surge, such increases would result in a temporary spike in the core inflation rate, not a sustained higher rate. Once businesses adjust their prices to cover the higher costs, prices should not rise further and inflation should return to its earlier rate. Furthermore, although oil prices remain high, they have recently fallen. Futures markets are not expecting a rebound. However, if the rate of inflation begins increasing consistently, this may ultimately result in a self-fulfilling prophesy of a higher rate of inflation indefinitely. As such, inflation is expected to remain moderate in 2007. As measured by the CPI-U, inflation is forecasted to be 2.5 percent. As measured by GDP Chain Price Deflator, it is expected to be 2.8 percent. Table 1-9 presents price changes for 2006 and 2007 as measured by the GDP Price Index.

Table 1-9

U.S. Consumer Prices Percent Change, Seasonally Adjusted, 2006-2007			
	Prices		
	2006	2007	
GDP Chain Price Deflator	3.0 %	2.8 %	
Consumer Price Index	3.4	2.5	
Less Food & Energy	2.2	2.7	
Shelter	2.6	3.1	
Food	2.4	2.3	
Medical Care	4.2	5.3	

Source: Moody's Economy.com

The core rate of inflation is expected to moderate gradually during 2007. Some of the factors that

pushed up core inflation in the recent past should dissipate. One factor that is looming on the horizon is labor costs, which depend on both the compensation received by workers and labor productivity. Labor costs, which account for roughly two-thirds of a firm's total costs, have been rising quickly recently. Some part of this acceleration reflects the tightening of the labor market.

More specifically, the core rate of inflation is expected to be 2.7 percent in 2007. Medical care costs are

expected to increase 5.3 percent, shelter costs are expected to increase 3.1 percent, food away from home is expected to increase 2.4 percent, and food itself is expected to increase 2.3 percent.

Productivity. Productivity, as measured by output per hour, is expected to grow during 2007, but at a slower pace than was experienced in 2006 when the growth rate reached 4.7 percent. Although productivity growth is expected to grow, the increase is expected to be only 2.7 percent.

Chapter 2

Kansas Employment & Income

Overview

Overall, the Kansas economy is expected to continue experiencing modest growth in 2007. Gross state product (GSP) is forecasted to increase by 4.8 percent, and personal income is expected to increase by 5.3 percent. Table 2-1 presents major Kansas economic trends for 2006 and 2007.

Table 2-1

Major Kansas Economic Trends	2006	2007
GSP Growth (\$ Constant)	5.6 %	4.8 %
Personal Income Growth (\$ Current)	6.4	5.3
Employment Growth Rate		
Place of Residence	0.7	1.6
Place of Work	0.9	1.5
Unemployment Rate (Monthly Average)	5.1	4.7

Personal income growth in 2007 will be sustained by growth in nonfarm proprietors' income (8.1 percent) and other labor income (7.9 percent). Contributions for social insurance are expected to increase 6.5 percent, while transfers are expected to increase 5.4 percent. Salaries and wages, as well as dividends, interest, and rents, are expected to grow modestly at 4.6 percent each. Meanwhile, the residence adjustment is expected to increase by 3.0 percent. Employment by place of residence is expected to increase by 1.6 percent, while employment by place of work is expected to increase by 1.5 percent in 2007. The unemployment rate is expected to decrease from 5.1 percent in 2006 to 4.7 percent in 2007. This is slightly below the forecasted unemployment rate for the U.S. of 4.9 percent.

In 2006, annual employment increased in both the goods producing industries (1.6 percent) and the services producing industries (0.5 percent). Within the goods producing industries, construction employment increased 3.4 percent; natural resources and mining employment increased by 9.2 percent; and manufacturing employment increased by 0.8 percent. Within the services producing industries, increases were specific to professional and technical services

(also 2.4 percent); government (2.3 percent); other services (1.1 percent); finance (0.7 percent), and education and health services (0.5 percent). Decreases in employment occurred in information (-4.6 percent); trade, transportation, and utilities (-1.1 percent); and leisure and hospitality (0.8 percent). Farm employment increased 0.5 percent in 2006.

Over-the-year (October 2005 to October 2006) job growth in October reflected the improving Kansas economy. Non-farm salaries and wages employment reached 1,352,300 jobs, an increase of 9,400 jobs since October 2005. Eight of the eleven reporting industry sectors showed job increases in October compared to a year before. Primary contributors to the increase include government (5,900 jobs), professional and technical services (3,100 jobs); construction (2,200 jobs); and manufacturing (1,500 jobs). The state's unemployment rate fell from 4.8 percent in October 2005 to 4.2 percent in October 2006.

Although employment growth was experienced during 2006, the state's economic recovery proceeded at a slower rate than the nation as a whole. One factor that caused the slower recovery relative to the nation was that the growth in manufacturing employment was sluggish. Kansas' manufacturing industry accounts for more than 13.0 percent of total employment. Within the manufacturing industry, job growth in the transportation manufacturing sector is significant because of the Wichita area's focus on aircraft manufacturing and the Kansas City area's focus on car and truck manufacturing. Changes in employment in either sector are noteworthy. The Wichita area's aircraft related production industry accounts for approximately 20.0 percent of all of the state's manufacturing jobs, while the Kansas City area's car and truck manufacturing accounts for 1.9 percent. Although nationwide aircraft manufacturing has been affected severely since the September 11th terrorist attacks, aerospace products manufacturing rebounded 4.4 percent in 2006.

The Kansas agricultural sector produces a wide array of products, with wheat, corn, sorghum, and soybeans

as the main crops. Kansas is the nation's largest wheat producer, harvesting nearly 400.0 million bushels of wheat per year, which is approximately 20.0 percent of the total U.S. wheat output. Although prices were higher in 2006, yields for the primary fall crops in Kansas are expected to decline from 2005 levels. Overall crop production across the state also is down considerably. In fact, corn, soybeans, and sorghum are forecasted to be down significantly according to Kansas Agricultural Statistics Service. In addition to the significant contribution Kansas makes to the production of row crops, the state is a large producer of livestock. More than 60.0 percent of the state's agricultural receipts are derived from cattle production. These receipts are expected to remain steady even though they are below last year's levels. Overall, farm income in 2006 is expected to be lower than the previous year because of high yields for major crops across Kansas in 2005, this year's lower commodity prices, higher fuel prices, and limited export flows.

Kansas Employment Review

Employment data are compiled in two ways: by place of residence and by place of work. The first compilation, employment by place of residence, is based on a sample survey of households. From the sample survey, the civilian labor force is determined. Once the civilian labor force is determined, then employment, unemployment, and the unemployment rate are derived. Children, retirees, military personnel, and those who are not actively seeking work, are not considered to be part of the civilian labor force. The second compilation is based on employment by place of work. For this compilation, data are compiled from information primarily obtained directly from firms as part of the unemployment insurance program. Place of work data are further categorized by industry.

Employment by Place of Residence

From October 2005 to October 2006, the Kansas civilian labor force grew at a rate of 0.1 percent, with employment increasing 0.8 percent and unemployment decreasing 11.9 percent. These changes resulted in a 0.6 percent decrease in the state's unemployment rate.

Table 2-2 presents Kansas over-the-year employment details for 2005 and 2006, by place of residence.

Table 2-2

Place of Residence Data	2005	2006	%
			Chng.
Civilian Labor Force	1,481,525	1,483,633	0.1 %
Employment	1,410,044	1,420,675	0.8
Unemployment	71,481	62,958	(11.9)
Unemployment Rate	4.8	4.2	(0.6)

Source: KS Dept. of Labor, Labor Market Info. Servs.

Using the civilian labor force as the base, other information can be derived. Specifically, employment in Kansas can be determined. Figure 2-1 presents trends in the Kansas civilian labor force from 1977 through 2006.

Figure 2-1:

Similar to the civilian labor force, Kansas employment, as measured by place of residence, grew more rapidly during 2006 (0.5 percent) than in 2005 (0.4 percent). In 2006, Kansas employment grew at a rate of 4.4 percent compared to a 1.0 percent increase in 2005. Figure 2-2, which is shown at the top of the next page, presents Kansas employment trends by place of residence from 1977 through 2006.

The unemployment rate is based on the civilian labor force also. The unemployment rate in Kansas decreased from 5.1 percent to 4.7 percent. The highest rate during the last several decades occurred in 1982 when the unemployment rate reached 6.5 percent and

Figure 2-2:

then fell to 6.0 percent in 1983. Rates have not reached those levels for quite some time; however, the low levels experienced in the late 1990s are not anticipated in the near future either. Figure 2-3 presents the Kansas unemployment rate from 1977 through 2006.

Figure 2-3:

Employment by Place of Work

There are three broad classifications of employment by place of work: the goods producing industries, the services producing industries, and farming. This section presents an overview of employment in the goods producing industries by subcategory. The next section presents employment in the services producing industries in the same manner, followed by farming

Compared to October a year ago, overall employment in Kansas, as measured by place of work, increased at

a 0.7 percent rate. Figure 2-4 presents Kansas employment by place of work for 2005 and 2006.

Figure 2-4

Table 2-3 presents Kansas employment details for 2005 and 2006, by place of work.

Table 2-3

Place of Work Data	Kansas Employment, by Place of Work October 2005-October 2006		% Chng.

Goods Producing Industries

As measured by place of work, employment in the goods producing industries increased 1.8 percent in 2006. There are three general categories within the goods producing industries: natural resources, construction, and manufacturing.

Natural Resources & Mining. The natural resources and mining super-sector is made up of two parts: the agriculture, forestry, fishing, and hunting sector, and

the mining sector. The agriculture, forestry, fishing, and hunting sector is establishments primarily engaged in growing crops, raising animals, harvesting timber, and harvesting fish or other animals from a farm, ranch, or their natural habitats. The mining sector is made up of establishments that extract naturally occurring mineral solids (coal and ores), liquid minerals (crude petroleum), and gases (natural gas). The term mining is used in the broad sense to include quarrying, well operations, beneficiating (e.g., crushing, screening, washing, and flotation), and other preparation that is customarily performed at the mine site, or as a part of mining activity. During 2006, natural resources mining employment rose by 2.7 percent. Figure 2-5 compares monthly employment in natural resources for 2005 and 2006.

Figure 2-5

Construction. The construction sector includes establishments primarily engaged in the construction of buildings or engineering projects (e.g., highways and utility systems). Establishments primarily engaged in the preparation of sites for new construction and establishments primarily engaged in subdividing land for sale as building sites also are included in this sector. Construction work done may include new work, additions, alterations, or maintenance and repairs. Activities of these establishments generally are managed at a fixed place of business, but they usually perform construction activities at multiple project sites.

During 2006, monthly construction employment has consistently remained above 2005 levels through October. Overall, construction employment grew at a 3.4 percent rate in 2006. This particular industry sector is affected greatly by the seasons and the

weather. For this reason, it is important to consider the inherent seasonal nature of the industry when analyzing construction employment changes. Figure 2-6 presents trends in construction employment in Kansas for 2005 and 2006.

Figure 2-6

Manufacturing. The manufacturing sector consists of establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. In 2006, manufacturing employment increased 0.8 percent. Monthly manufacturing employment began 2006 below last year's levels, but surpassed 2005 levels in September and October. Figure 2-7 presents trends in manufacturing employment for 2005 and 2006.

Figure 2-7

During 2006, durable goods manufacturing employment increased by 3.7 percent. Durable goods are defined as goods with an expected useful life of more than one year. In 2006, employment in durable goods

manufacturing exceeded last year's levels for the entire year. Figure 2-8 presents the yearly trends in durable goods manufacturing employment, by month, for both 2005 and 2006.

Figure 2-8

Four important subcategories within the durable goods manufacturing are fabricated metal products, machinery, electrical equipment, and transportation equipment. Employment in fabricated metal products manufacturing increased 6.4 percent, employment in machinery manufacturing increased 2.4 percent, employment in electrical equipment manufacturing increased 2.2 percent, and employment in transportation equipment manufacturing increased by 4.7 percent.

The dynamics of aircraft and parts manufacturing employment in the Wichita metropolitan area are of particular interest when analyzing the Kansas economy. As shown in Figure 2-9, transportation

Figure 2-9

equipment manufacturing employment has been significantly above 2005 levels for the entire year through October.

Employment trends in transportation equipment, a sub-component of durable goods manufacturing, are important for four reasons. First, transportation equipment manufacturing is a major exporting sub-sector within the Kansas economy. Second, aircraft and related parts manufacturing is a major subcategory of the transportation equipment manufacturing sub-sector. Third, the Wichita metropolitan area's economy is driven largely by aircraft-related manufacturing. Fourth, the Kansas manufacturing industry is driven to a considerable extent by the Wichita metropolitan area's manufacturing employment. For these reasons, employment changes in transportation equipment manufacturing have a potentially significant effect on the Kansas economy. Employment in aerospace products manufacturing increased by 4.4 percent in 2006.

Nondurable goods are defined as goods with an expected useful life of less than one year. During 2006, employment in nondurable goods decreased by 3.9 percent. Within the nondurable goods manufacturing category, there are three important sub-categories: food manufacturing, printing and related products, and plastics and rubber. Employment in nondurable goods manufacturing has been below 2005 levels for the entire year through October. Figure 2-10 shows nondurable goods manufacturing employment for 2005 and 2006.

Figure 2-10

The largest of these subcategories, and the one with the most effect on the Kansas economy, is food

manufacturing. Figure 2-11 presents trends in food and kindred products employment in Kansas for 2005 and 2006.

Figure 2-11

This sector accounts for more than 45.0 percent of all nondurable goods employment in Kansas. Although trending upward in 2006, employment in food manufacturing decreased 0.3 percent from a year ago. In fact, food manufacturing employment has been below 2005 levels for the entire year through October. However, within food manufacturing, animal slaughtering employment increased by 6.0 percent, while employment in plastics and rubber manufacturing declined 13.0 percent, primarily because of the labor stoppage at the Goodyear facility in Topeka. Employment in printing and related products manufacturing held steady.

Services Producing Industries

The second broad classification of employment by place of work is the services producing industries. Employment in the services producing industries grew at a 0.5 percent rate in 2006. There are eight major categories within the services producing industries. They include trade, transportation, and utilities; information; finance; professional and technical services; educational and health services; leisure and hospitality services; other services; and government. In 2006, five of the major categories experienced increases in employment, while three of the major categories experienced decreases.

Trade, Transportation, & Utilities. The trade super-sector is made up of two parts: the wholesale trade

sector and the retail trade sector. The wholesale trade sector is made up of establishments engaged in wholesaling merchandise, generally without transformation, and rendering services that are incidental to the sale of merchandise. The wholesaling process is an intermediate step in the distribution of merchandise. Wholesalers are organized to sell or arrange the purchase or sale of (1) goods for resale (i.e., goods sold to other wholesalers or retailers), (2) capital or durable nonconsumer goods, and (3) raw and intermediate materials and supplies used in production. Wholesalers sell merchandise to other businesses and normally operate from a warehouse or office.

The retail trade sector consists of establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The retailing process is the final step in the distribution of merchandise. Retailers are, therefore, organized to sell merchandise in small quantities to the general public. Two main types of retailers exist: store and nonstore retailers.

The transportation and warehousing sector includes industries that provide transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to modes of transportation. Establishments in these industries use transportation equipment or transportation-related facilities as a productive asset. The type of equipment used depends on the mode of transportation. The modes of transportation are air, rail, water, road, and pipeline.

The utilities sector consists of establishments engaged in providing utility services, specifically electric power, natural gas, steam supply, water supply, and sewage removal. Within this sector, the specific activities associated with the utility services provided vary by utility. Electric power includes generation, transmission, and distribution; natural gas includes distribution; steam supply includes provision and/or distribution; water supply includes treatment and distribution; and sewage removal includes collection, treatment, and disposal of waste through sewer systems and sewage treatment facilities.

Employment in trade, transportation, and utilities decreased 1.1 percent in 2006. During 2006, employment remained below 2005 levels for most of the year through October. Trends in transportation and

public utilities employment for 2005 and 2006 are presented in Figure 2-12.

Figure 2-12

Within the trade, transportation, and utilities category, there are four subcategories. These categories include utilities; transportation and warehousing; wholesale trade; and retail trade. Although utilities employment began the year above 2005 levels, in March 2006, it declined significantly and remained below last year's levels through October. Compared to a year ago, utilities employment is down 5.4 percent. Figure 2-13 presents trends in utilities employment in 2005 and 2006.

Figure 2-13

Employment in transportation and warehousing has been below 2005 levels for the entire year through October and is down 3.6 percent compared to a year ago. Figure 2-14, which is shown at the top of the next page, presents trends in transportation and warehousing employment in 2005 and 2006.

Figure 2-14

Wholesale trade employment began the year below 2005 levels, rose above last year's level in March, then retreated back below last year's level in October. Compared to last year over all, wholesale trade employment is down 0.2 percent. Trends in wholesale trade employment for both 2005 and 2006 are shown in Figure 2-15.

Figure 2-15

During 2006, retail trade employment levels remained below 2005 levels for most of the year. Retail trade employment is down 0.5 percent compared to last year. Trends in retail trade employment during 2005 and 2006 are shown in Figure 2-16, which appears at the top of the next column.

Information. The information sector includes establishments that are engaged in the following processes: (1) producing and distributing information and cultural products, (2) providing the means to transmit or distribute these products, as well as data or communications, and (3) processing data. The first

Figure 2-16

major component of this sector is the publishing industry, which includes software publishing, traditional publishing, and publishing exclusively on the Internet. The second major component is motion picture and sound recording. The third is broadcasting, which includes traditional broadcasting, as well as broadcasting exclusively over the Internet. Telecommunications also is a component of this sector, as are Internet service providers and web search portals, data processing industries, and the information services industries. Information employment levels in 2006 have been running below 2005 levels all year and continue to trend downward. Overall, employment in information decreased 4.6 percent in 2006. Specifically within that category, telecommunications employment decreased by 0.9 percent. Figure 2-17 shows the 2005 and 2006 trends for information employment.

Figure 2-17

Financial Activities. The financial activities supersector is made up of two parts: the finance and

insurance sector, and the real estate and rental and leasing sector. The finance and insurance sector consists of establishments primarily engaged in financial transactions (transactions involving the creation, liquidation, or change in ownership of financial assets) and/or in facilitating financial transactions. Three principal types of activities are identified: (1) raising funds by taking deposits and/or issuing securities and, in the process, incurring liabilities; (2) pooling of risk by underwriting insurance and annuities; and (3) providing specialized services that facilitate or support financial intermediation, insurance, and employee benefit programs. The real estate and rental and leasing sector consists of establishments primarily engaged in renting, leasing, or otherwise allowing the use of tangible or intangible assets, and those that provide related services.

The major portion of this sector is made up of establishments that rent, lease, or otherwise allow the use of their own assets by others. This sector also includes establishments primarily engaged in managing real estate for others, selling, renting and/or buying real estate for others, and appraising real estate. The main components of this sector are the real estate lessors industries; equipment lessors industries, including motor vehicles, computers, and consumer goods; and lessors of non-financial intangible assets, except copyrighted works.

In 2006, employment in financial activities increased by 0.7 percent. Within this category insurance employment increased 5.0 percent, credit employment increased 1.4 percent, while real estate employment decreased by 1.9 percent. As shown in Figure 2-18, financial activities employment levels began the year

below 2005 levels, dropped below last year's levels during the middle of the year, and rebounded in August.

Professional & Business Services. The professional and technical services super-sector is made up of three parts: the professional, scientific, and technical services sector; the management of companies and enterprises sector; and the administrative/support and waste management/remediation services sector. The professional, scientific, and technical services sector consists of establishments that specialize in performing professional, scientific, and technical activities for others. These establishments perform activities that include, legal advice and representation; veterinarian services; accounting, bookkeeping, and payroll services; as well as architectural, engineering, and specialized design services. Also included in the professional, scientific, and technical services sector are enterprises that provide services related to computers, consulting, research, advertising, photography, translation, and interpretation. The sector that is entitled management of enterprises includes establishments that hold the securities of, or other equity interests in, enterprises for the purpose of owning a controlling interest or influencing management decisions, as well as establishments that administer sections of the enterprise that normally undertake the strategic or organizational planning and decision making role. Government is not included in this sector.

The administrative/support and waste management/remediation services sector is made up of establishments that perform routine support activities for the day-to-day operations of other organizations. These essential activities are often undertaken in-house in many sectors of the economy. Activities performed include office administration, hiring and placing personnel, as well as document preparation and similar clerical services. It also includes solicitation, collection, security and surveillance, cleaning, and waste disposal.

Professional and business services employment began 2006 above 2005 levels, but dropped in March and remained below 2005 levels for much of the year. However, in October, employment rebounded. The result was a year-over-year increase of 2.4 percent. Within this category, employment in administrative and support services increased 6.4 percent, while

Figure 2-18

employment in professional, scientific, and technical services increased 0.6 percent. Employment in the management of companies and enterprises remained steady throughout 2006. Figure 2-19 presents trends in professional and business services employment for 2005 and 2006.

Figure 2-19

Educational & Health Services. The education and health services super-sector is made up of two parts: the educational services sector and the health care and social assistance sector. Only privately-owned establishments are included here because publicly-owned establishments that provide education or health services are included in government. The educational services sector is made up of establishments that provide instruction and training in a variety of subjects. This instruction and training is provided by specialized institutions, such as schools, colleges, universities, and training centers. The health care and social assistance sector is made up of establishments that provide health care and social assistance for individuals. The industries in this sector are arranged on a continuum starting with those that provide medical care exclusively, continuing with those that provide health care and social assistance, and finally those that provide only social assistance.

In 2006, education and health services employment began the year above 2005 levels, dipped below last year's levels at midyear, and rebounded above 2005 levels in July. The result was an overall 0.5 percent gain compared to a year ago. Within this category, employment in hospitals increased by 4.4 percent and employment in health care and social assistance increased by 0.7 percent. A 1.2 percent decrease was

realized in employment in educational services. Figure 2-20 presents trends in educational and health services employment for 2005 and 2006.

Figure 2-20

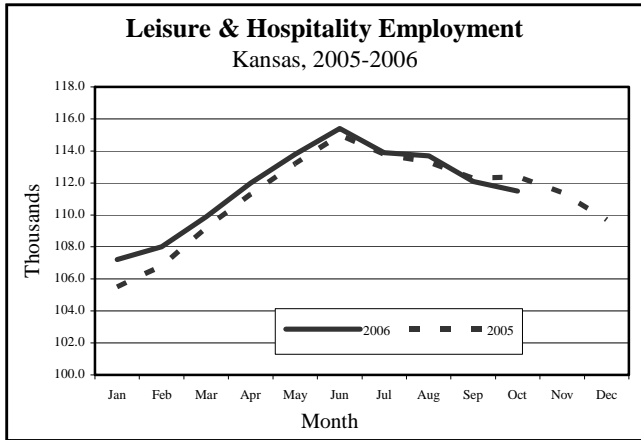

Leisure & Hospitality Services. The leisure and hospitality super-sector is made up of two parts: the arts, entertainment, and recreation sector, and the accommodation and food services sector. The arts, entertainment, and recreation sector includes a range of establishments that operate facilities or provide services to meet varied cultural, entertainment, and recreational interests. This sector includes establishments that are involved in producing, promoting, or participating in live performances, events, or exhibits intended for public viewing; establishments that preserve and exhibit objects and sites of historical, cultural, or educational interest; and establishments that operate facilities or provide services that enable patrons to participate in recreational activities or pursue amusement, hobby, and leisure-time interests. The accommodation and food services sector consists of establishments that provide customers with lodging and/or prepare meals, snacks, and beverages for immediate consumption. The sector includes both accommodation and food services establishments because the two activities are often combined at the same establishment.

In 2006, employment in leisure and hospitality services remained above 2005 levels for much of the year; however, industry employment was actually down 0.8 percent compared to a year ago. Within that sector, employment in amusement and gambling increased by 2.3 percent. However, decreases in employment were realized in accommodations (-0.3

percent), food services (-0.5 percent), and arts and entertainment (-5.0 percent). Figure 2-21 below presents trends in leisure and hospitality employment for 2005 and 2006.

Figure 2-21

Other Services. The other services sector consists of establishments engaged in providing services not specifically provided for elsewhere in the North American Industry Classification System. Establishments in this sector are primarily engaged in activities, such as equipment and machinery repair; promoting or administering religious activities; grant making; advocacy; and providing dry cleaning and laundry services, personal care services, death care services, pet care services, photofinishing services, temporary parking services, and dating services. In 2006, employment in other services increased by 1.1 percent. Other services employment remained above 2005 levels for most of the year. Figure 2-22 presents other services employment trends for 2005 and 2006.

Figure 2-22

Government. The government sector is made up of publicly-owned establishments. This sector includes federal, state, and local government agencies that administer, oversee, and manage public programs and have executive, legislative, or judicial authority over other institutions. These agencies also set policy, create laws, adjudicate civil and criminal legal cases, and provide for public safety and national defense. Public schools and public hospitals are included in government. Figure 2-23 presents trends in government employment for 2005 and 2006.

Figure 2-23

Total government employment (civilian only) in Kansas increased by 2.3 percent in 2006. Local government employment increased 3.0 percent, while state government employment increased 1.1 percent, and federal government employment in Kansas decreased 0.4 percent. Overall government employment in 2006 was above 2005 levels for the entire year through October. A downturn in government employment typically occurs each July and August and is attributable largely to the fact that faculty at public schools and universities are on nine-month appointments.

Farming

Farm employment was above 2005 levels for most of 2006 through October. Thus, compared to October of 2005, farm employment was up 0.5 percent in 2006. Much of the variation in farm employment during the year is due to the inherently seasonal nature of the industry. Figure 2-24 is shown on the next page and presents farm employment trends for 2005 and 2006.

Figure 2-24

Comparative Employment in the Plains Region

The employment data presented in this section may not be in exact conformity with data presented earlier because the data are compiled from different sources. The information in earlier sections is based on data from the Kansas Department of Labor, Labor Market Information Services, while the information in this section is based on data from the U.S. Department of Labor, Bureau of Labor Statistics. In all cases, this report presents the most recent data available. Table 2-4, which is shown on the next page, presents employment growth rates for Kansas and the Plains region from 2004 to 2005. The Plains region encompasses seven states, including Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota. Table 2-5, which appears at the top of page 25, shows employment growth rates for Kansas and the Plains region from October 2005 to October 2006.

Employment by Industry Type

Total nonfarm employment in Kansas increased at a rate of 0.8 percent in 2005 compared to a 1.3 percent growth rate realized in the Plains region as a whole. North Dakota experienced the highest rate of increase at 2.1 percent, followed by South Dakota at 1.7 percent, and Iowa at 1.6 percent. Kansas had the lowest growth rate in the seven-state region.

From October 2005 to October 2006, total nonfarm employment in Kansas increased at a 0.7 percent rate compared to a 1.3 percent growth rate realized by the Plains region as a whole. Minnesota and South Dakota had the highest growth rates at 2.0 percent each, followed by Iowa (1.7 percent). Kansas ranked sixth out of the seven states in the Plains region. Only Missouri had a lower growth rate. Increases in Kansas employment that were greater than the regional average include construction and mining (3.3 percent); manufacturing (0.8 percent); other services (1.1 percent); and government (2.3 percent). Industries in Kansas that realized employment increases below the regional average include financial activities (2.1 percent); professional and business services (2.4 percent); and educational and health services (0.5 percent). During 2006, Kansas realized employment decreases in trade, transportation, and utilities (-1.1 percent), information (-4.6 percent), and leisure and hospitality services (-0.8 percent).

Natural Resources & Mining. Mining and natural resources employment in the Plains region decreased 6.2 percent in 2005. However, Kansas realized growth in this sector's employment, leading the region with a growth rate of 5.6 percent.

Construction. Construction employment in the Plains region increased 1.4 percent in 2005. However, in Kansas, construction employment decreased by 0.2 percent, ranking the state sixth out of seven states in the region. South Dakota led the region with a 5.0 percent increase, followed by Iowa with a 3.8 percent increase, and Missouri with a 2.5 percent increase. During 2006, construction and mining employment in the Plains region, on average, increased by 2.7 percent. Kansas ranked third with a 3.3 percent increase. Iowa led the region with a 7.5 percent increase, followed by South Dakota with a 4.3 percent increase.

Manufacturing. Manufacturing employment in the Plains region increased by 1.0 percent in 2005. North Dakota led the region with a 5.3 percent increase, followed by Iowa and South Dakota with 3.2 percent increases each. Kansas ranked fourth with a 1.6 percent increase in manufacturing employment. In 2006, manufacturing employment in the region remained steady. South Dakota experienced the largest increase at 4.4 percent, followed by Iowa with a 1.9 percent increase, and Kansas with a 0.8 percent increase.

Source: U.S. Department of Labor, Bureau of Labor Statistics

Trade, Transportation, & Utilities. In 2005, trade, transportation, and utilities employment increased by 1.0 percent in the region. North Dakota recorded the largest employment increase (2.2 percent), followed by Nebraska (1.9 percent), and South Dakota (1.8 percent). Kansas was the only state reporting a loss of employment in this category (-0.3 percent). In 2006, trade, transportation, and utilities employment growth in the region increased by 0.6 percent. North Dakota and South Dakota led the seven-state region with 1.9 percent growth rates each, followed by Minnesota and Missouri with 0.9 percent growth rates each. Again, Kansas was the only state in the region reporting a loss of employment (-1.1 percent).

Information. In 2005, information employment in the Plains region decreased by 2.3 percent. Employment in information in South Dakota increased by 1.5 percent, followed North Dakota with no change in employment, and Iowa with a 1.2 percent decrease. Kansas reported the largest decrease (-4.8 percent). In 2006, information employment in the Plains region decreased by 1.8 percent. South Dakota had the highest growth rate (4.3 percent), followed by Minnesota (2.6 percent), and North Dakota (-1.3 percent). Kansas ranked sixth (-4.6 percent).

Financial Activities. In 2005, financial activities employment grew at a 1.3 percent rate across the region as a whole. South Dakota led the region with a 2.2 percent growth rate, followed by Nebraska with a 2.1 percent growth rate, and North Dakota with a 1.6 percent growth rate. In 2005, Kansas had the lowest

growth rate in the region at 0.6 percent. In 2006, financial activities employment in the Plains region grew at a 2.1 percent rate. Nebraska led the region with a 5.1 percent growth rate, followed by North Dakota with a 4.2 percent growth rate, and South Dakota with a 3.8 percent growth rate. Kansas ranked sixth in the region. Only Missouri had a lower growth rate than Kansas (0.7 percent).

Professional & Business Services. Professional and business services employment increased by 2.9 percent in the region as a whole in 2005. North Dakota led the region with 7.8 percent growth, followed by Missouri with 4.6 percent growth, and Iowa with 4.0 percent growth. Kansas and Nebraska tied for fourth place with 3.0 percent growth each. In 2006, the region as a whole experienced a 3.0 percent increase in employment in this category. South Dakota led the region with 6.2 percent growth, followed by Minnesota with 5.2 percent growth, and Iowa with 3.7 percent growth. Kansas ranked fifth in the region with 2.4 percent growth.

Educational & Health Services. Educational and health services employment in the Plains region as a whole increased 2.3 percent in 2005. Minnesota led the region with a 2.6 percent growth rate, followed by Kansas with a 2.4 percent growth rate, and Missouri with a 2.3 percent growth rate. In 2006, the region as a whole experienced a 2.1 percent growth rate in educational and health services employment. Minnesota and Nebraska led the region with 3.3 percent growth each, followed by Iowa with 2.1

percent growth. Kansas ranked last with 0.5 percent growth.

Leisure & Hospitality Services. In 2005, leisure and hospitality services employment in the Plains region as a whole increased at a 1.9 percent rate. Nebraska experienced the highest growth at 2.3 percent, followed by South Dakota with 2.2 percent growth, and Iowa with 2.1 percent growth. Kansas ranked last with 0.9 percent growth. In 2006, leisure and hospitality services employment increased by 1.6 percent in the region. Minnesota and North Dakota recorded the highest growth at 3.8 percent each, followed by Iowa and South Dakota with a 2.4 percent growth rates each. Kansas ranked last with a 0.8 percent decrease.

Other Services. Other services employment increased at a 0.5 percent rate in the Plains region in 2005. Nebraska led the region in other services employment growth with a 4.0 percent increase, followed by North Dakota with no change, and Kansas with a 0.2 percent decrease. In 2006, the region as a whole experienced 0.7 percent growth in other services employment. North Dakota led the region with 2.7 percent growth, followed by South Dakota with 1.9 percent growth, and Minnesota with 1.5 percent growth. Kansas ranked fourth with 1.1 percent growth in other services employment.

Government. Government employment in the Plains region decreased 0.5 percent in 2005. Minnesota led the region with a 1.1 percent growth rate, followed by Nebraska, North Dakota, and South Dakota with 0.7 percent growth rates each. Kansas ranked sixth with a 0.3 percent growth rate. In 2006, government employment in the Plains region increased by 1.0 percent. Kansas led the region with a 2.3 percent increase, followed by Nebraska with a 2.2 percent increase, and Missouri with a 1.5 percent increase.

Kansas Personal Income Review

Personal income is defined as the income received by, or on behalf of, all residents. It consists of income from all sources received by persons, which includes participation in production, both government and business transfer payments, and government interest,

which is treated as a transfer payment. "Persons" is defined as individuals, nonprofit institutions primarily serving individuals, private noninsured welfare funds, and private trust funds.

Personal income is calculated by summing its components, which include salaries and wages, other labor income, proprietors' income, personal rental income, personal dividend income, personal interest income, and personal transfer payments, less personal contributions for social insurance.

A lag of eight months occurs before final estimates of state personal income for the previous calendar year are released. Accordingly, 2005 estimates of Kansas personal income were not available until August 2006. Kansas personal income totaled over \$90.0 billion in 2005, which is a 5.7 percent increase over 2004.

Personal Income by Source

Salaries and wages accounted for over half of Kansas personal income and increased at a 4.0 percent rate in 2005. The second largest source of personal income in Kansas, is dividends, interest, and rent. Dividends, interest, and rent increased by 6.4 percent. Other labor income increased 8.2 percent in 2005. This category consists largely of employer payments for health insurance and other benefits. Other labor income reached a level of approximately \$13.4 billion in 2005, indicating the importance of fringe benefits in personal income growth. Proprietors' income increased 11.0 percent in 2005. Specifically, farm proprietors' income rose by 51.2 percent in 2005, while non-farm proprietors' income increased 8.2 percent. Transfers increased at a 6.5 percent rate in 2005, while personal contributions for social insurance increased 9.1 percent. A significant portion of Kansas personal income is paid to Kansans from out-of-state sources. This portion is particularly significant for residents who live in Johnson and Wyandotte Counties and work in Missouri. This significance is reflected in the residence adjustment of \$840.3 million, which increased by 10.0 percent in 2005.

Nonfarm Earnings by Industry

Increases in earnings were realized in a number of industries in 2005. Specifically, forestry, fishing, and

related activities earnings increased 6.8 percent in 2005, while mining earnings increased 19.1 percent and utilities earnings increased 5.1 percent. Earnings from construction increased 8.4 percent and manufacturing earnings increased 5.5 percent in 2005. Specifically, durable goods manufacturing earnings increased 6.5 percent, while nondurable goods manufacturing earnings increased 4.0 percent. Wholesale trade earnings increased 6.2 percent, while retail trade earnings increased 1.8 percent. Transportation and warehousing earnings increased 2.7 percent.

In 2005, the only decreases in earnings in the services industries were realized in information services earnings (-3.5 percent) and earnings from the arts, entertainment, and recreation services (-2.2 percent). Increases were realized in earnings from finance and insurance (4.2 percent), real estate and rental and leasing (7.8 percent), professional and technical services (9.1 percent), management of companies and enterprises (12.0 percent), administrative and waste services (20.1 percent), and educational services (5.1 percent). Increases also were realized in earnings from health care and social assistance services (5.3 percent), accommodation and food services (2.4 percent), and other services (2.7 percent) in 2005. In the government sector, earnings grew at a 4.3 percent rate in 2005. Within total government, civilian federal government earnings increased 0.1 percent, military earnings grew by 9.1 percent, and state and local government earnings increased 4.3 percent. Appendix A presents a breakdown of Kansas personal income and growth rates by industry for 2004 and 2005.

Kansas Personal Income Estimates

Personal income in Kansas grew by 6.4 percent in 2006. Table 2-6, which is shown at the bottom of the page, presents Kansas personal income in 2005. In addition, the table shows the estimates for 2006 and the forecasts for 2007.

In 2006, salaries and wages, which are the largest component of Kansas personal income, increased 6.2 percent in 2006, while other labor income increased 10.1 percent, and overall proprietors' income increased 2.7 percent. Specifically, farm proprietors' income decreased by 73.7 percent; however, this significant decrease was offset by a 10.2 percent increase in non-farm proprietors' income. The fact that a 10.2 percent increase in non-farm proprietor's income can offset completely a 73.7 percent decrease in farm proprietors' income indicates how much more income is attributable to non-farm activities. During the same time frame, dividends, interest, and rent increased by 6.2 percent, and transfer payments increased by 7.6 percent. Finally, the residence adjustment for income earned by Kansas residents from sources outside the state increased 5.3 percent.

In 2007, Kansas personal income is forecasted to grow at a 5.3 percent rate. Growth in salaries and wages is expected to slow to 4.6 percent. However, other labor income growth is expected to remain high at 7.9 percent. Proprietors' income growth is expected to increase 7.2 percent, while growth in dividends, interest, and rent is expected to increase 4.6 percent.

Table 2-6

Kansas Personal Income					
2005 Actual, 2006 Estimate, & 2007 Forecast					
<i>(Dollars in Millions)</i>					
	2005	2006	2007	Percent Change	
	Actual	Estimate	Forecast	2005-2006	2006-2007
Salaries & Wages Disbursements	\$ 47,666	\$ 50,618	\$ 52,959	6.2 %	4.6 %
Other Labor Income	13,411	14,771	15,940	10.1	7.9
Proprietors' Income:	9,062	9,307	9,977	2.7	7.2
Farm	811	213	145	(73.7)	(31.8)
Nonfarm	8,251	9,095	9,832	10.2	8.1
Dividends, Interest, & Rent	14,278	15,158	15,848	6.2	4.6
Transfers	12,989	13,979	14,735	7.6	5.4
Residence Adjustment	840	885	911	5.3	3.0
Less: Social Insurance	7,814	8,497	9,049	8.7	6.5
Total Personal Income	90,433	96,221	101,320	6.4	5.3

Transfer payments are expected to grow at a 5.4 percent rate in 2007.

Comparative Personal Income

In 2005, personal income growth in Kansas (5.7 percent) was higher than the growth that occurred in the Plains region (4.3 percent) and the U.S. (5.2 percent). Within the Plains region, North Dakota was the fastest growing state with 7.7 percent growth. It was followed by Kansas and South Dakota (4.9 percent). Appendix B presents a listing of comparative state personal income and per capita personal income data for all states for 2003 through 2005.

In 2005, Kansas per capita personal income growth (5.2 percent) exceeded both the Plains region (3.7 percent) and the U.S. (4.2 percent). North Dakota (7.6 percent) had the largest increase in per capita personal income in both the Plains region and the U.S., followed by Kansas, and South Dakota (4.2 percent).

Personal Income. Nationally, Kansas ranked 31st in total personal income, while Minnesota ranked 17th, Missouri ranked 20th, Iowa ranked 30th, Nebraska ranked 36th, South Dakota ranked 47th, and North Dakota ranked 50th in 2005. In terms of personal income growth, the Plains region, which averaged 4.3 percent growth, was ranked seventh out of the eight statistical regions. The Southwest region was the fastest growing at a rate of 7.7 percent. Nationally, North Dakota ranked 4th (7.7 percent), while Kansas ranked 22nd (5.7 percent), South Dakota ranked 30th (4.9 percent), Missouri ranked 33rd (4.7 percent), Nebraska ranked 43rd (3.9 percent), Minnesota ranked 47th (3.1 percent), and Iowa ranked 49th (2.7 percent).

Per Capita Personal Income. In 2005, the Plains region's average per capita personal income at \$33,362 lagged behind the national average, and was ranked fourth out of the eight regions. The New England region had the highest per capita personal income of \$41,785. It was followed by the Mideast region at \$39,755.

In 2005, Kansas ranked 24th (\$32,948) in the U.S. in per capita personal income. The Plains region state that ranked highest nationally was Minnesota's 10th place with a dollar value of \$37,322. Nebraska was

ranked 23rd (\$32,988); South Dakota ranked 27th (\$32,642); Iowa ranked 31st (\$31,795); Missouri ranked 32nd (\$31,299); and North Dakota ranked 33rd (\$31,230).

In terms of per capita personal income growth, the Plains region, which averaged 3.7 percent, lagged behind the national average of 4.2 percent, and ranked seventh out of the eight regions in 2005. The Southwest was the fastest growing region (5.7 percent) followed by the Rocky Mountain region (4.7 percent). In 2005 Kansas ranked 10th (5.2 percent) in per capita personal income, while North Dakota ranked 1st in the nation (7.3 percent), South Dakota ranked 34th (4.2 percent), Missouri ranked 38th (3.9 percent), Nebraska ranked 46th (3.2 percent), Minnesota ranked 47th (3.1 percent), and Iowa ranked 49th (2.7 percent).

Disposable Personal Income. Disposable personal income is defined as the amount equal to personal income minus personal taxes. In other words, disposable income is the income available for personal use. Nationally, Kansas ranked 31st in disposable personal income. Other states in the region ranked higher with Minnesota at 18th, Missouri at 20th, and Iowa at 30th. States in the region that ranked below Kansas include Nebraska (36th), South Dakota (47th), and North Dakota (50th) in 2005.

In terms of disposable income growth, the Plains region, which averaged 3.4 percent growth, lagged the national average of 4.1 percent and was ranked fifth out of the eight statistical regions. The Southeast region was the fastest growing at a rate of 6.8 percent followed by the Rocky Mountain region with a growth rate of 5.3 percent. Within the Plains region, North Dakota ranked 1st in the nation (6.9 percent), Kansas ranked 23rd (4.8 percent), South Dakota ranked 27th (3.4 percent), Missouri ranked 35th (3.0 percent), Nebraska ranked 46th (2.2 percent), Minnesota ranked 48th (2.1 percent), and Iowa ranked 49th (2.3 percent). Appendix C presents comparative state total and per capita disposable personal income data for the U.S., the eight regions, and each state for 2003 through 2005.

Per Capita Disposable Personal Income. The Plains region's average per capita disposable personal income of \$29,772 lagged behind the national average of \$30,441 in 2005. The Plains ranked fourth regionally. New England had the highest regional per

capita personal income (\$35,891). The Midwest followed (\$34,259). Of the Plains region states, Minnesota ranked 10th (\$32,637) in per capita personal income, while Kansas ranked 25th (\$29,560), South Dakota ranked 22nd (\$30,148), Nebraska was 24th (\$29,635), Iowa was 29th (\$28,722), North Dakota ranked 30th (\$28,542), and Missouri was 34th (\$28,001).

In terms of per capita disposable personal income growth, the Plains region averaged 2.8 percent, which was lower than the national average of 3.1 percent. It ranked seventh out of the eight regions nationally. The Southwest region was the fastest growing at 4.9 percent followed by the Rocky Mountains with a 3.7 percent growth rate. Of the Plains region states, North Dakota had the highest national ranking at 1st (6.9 percent). It was followed by Kansas at 9th (4.4 percent), South Dakota at 23rd (3.4 percent), Missouri at 35th (3.0 percent), Nebraska at 46th (2.2 percent),

Minnesota at 48th (2.1 percent), and Iowa at 49th (1.8 percent).

Per Capita Personal Income Trends. Kansas per capita personal income in 2005 was \$32,948, which is a 5.2 percent increase from the 2004 level. This increase is above both the 4.2 percent growth rate for the U.S. as a whole and the 3.7 percent growth rate for the Plains region. Kansas' per capita personal income has lagged behind the Plains region's average since 1994 and continued that trend in 2005. Kansas per capita income in 2005 was 1.2 percent below the Plains region's average and 4.5 percent below the national average. Over the past ten years Kansas per capita income, as a percentage of the national average, has ranged from a high of 95.5 percent in 2005, to a low of 92.8 percent in 2000. Table 2-7 presents historical per capita personal income data for Kansas, the Plains region, and the U.S. from 1994 through 2005.

Table 2-7

Chapter 3

Local & Regional Employment & Income

Major Labor Market Employment

The economy of Kansas generally is concentrated in urbanized areas, each with a similar economic base. For statistical purposes, these geographic areas include 4 metropolitan areas and 11 selected counties. The metropolitan areas include the Wichita metropolitan area (Butler, Harvey, and Sedgwick Counties), the Topeka metropolitan area (Shawnee County), the Lawrence metropolitan area (Douglas County) and the Kansas City, Kansas metropolitan area (Franklin, Johnson, Leavenworth, Linn, Miami, and Wyandotte Counties). The selected counties each contain a city that is the major economic base for the region. In addition, the city has a population that is in excess of 12,000 people and constitutes at least 50.0 percent of the total county population. The 11 selected counties and associated cities are Barton Co./Great Bend, Crawford Co./Pittsburg, Ellis Co./Hays, Finney Co./Garden City, Ford Co./Dodge City, Lyon Co./Emporia, McPherson Co./McPherson, Montgomery Co./Coffeyville-Independence, Reno Co./Hutchinson, Riley Co./Manhattan, and Saline Co./Salina. It should be kept in mind that employment estimates reported in this section are based on data through October 2006, which were the most recent information available when this report was prepared.

Employment by Place of Residence

Employment by place of residence is based on a sample survey of households. From the sample survey, the civilian labor force is determined. This number is then used as the basis from which employment, unemployment, and the unemployment rates are derived.

From October 2005 to October 2006, the civilian labor force increased in three of the state's four major labor markets—Lawrence (1.7 percent), Wichita (0.7 percent), and Kansas City (0.3 percent). However, the civilian labor force in Topeka decreased by 1.1 percent.

Employment reflected the same pattern as the civilian labor force with increases in three of the four metropolitan areas. Employment increased by 2.0 percent in the Lawrence metropolitan area, 1.8 percent in the Wichita metropolitan area, and 0.8 percent in the Kansas City metropolitan area, while employment decreased in the Topeka metropolitan area by 0.5 percent.

Although the labor force and employment followed the same pattern, the unemployment rate followed a different one. In fact, it declined in all four of the state's metropolitan labor markets from October 2005 to October 2006. The unemployment rate fell from 5.5 percent to 4.4 percent in the Wichita metropolitan area; from 5.3 percent to 4.8 percent in the Topeka metropolitan area; from 3.7 percent to 3.5 percent in the Lawrence metropolitan area; and from 5.1 percent to 4.7 percent in the Kansas City metropolitan area.

Employment by Place of Work

Employment by place of work is determined by compiling data primarily from information obtained from businesses covered by the unemployment insurance program. Employment by place of work data are then categorized by industry type. The two major categories are the goods producing industries and the services producing industries. The following section first presents employment by place of work for each of the 4 major metropolitan areas. The data for each of the 11 counties are presented in the following section.

Wichita Metropolitan Area. Based on place of work data, employment in all industries in the Wichita metropolitan area increased 1.8 percent in 2006. Employment in the goods producing industries increased by 3.2 percent, while employment in the service producing industries increased by 1.3 percent. Notably, 2.9 percent increases were realized in both overall manufacturing employment and aerospace products manufacturing. Table 3-1 presents employ-

ment in the Wichita metropolitan area for 2005 and 2006.

Table 3-1

Wichita Metropolitan Area Employment			
Butler, Harvey & Sedgwick Counties			
October 2005-October 2006			
	2005	2006	% Chg.

Government	40,800	41,100	0.7
Farm Employment	6,500	6,500	--

Source: Ks Dept. of Labor, Labor Mkt. Info. Service

Within the services producing industries, employment increased in six of the categories, including other services (4.1 percent), education and health services (3.4 percent), professional and business services (3.0 percent), leisure and hospitality (1.6 percent), finance (0.9 percent), and government (0.7 percent). Decreases

were realized in only two categories. Employment in the information category decreased 8.5 percent, while employment in the trade, transportation, and utilities category decreased 0.2 percent. Farm employment in the Wichita metropolitan area remained steady in 2006.

According to Moody's Economy.com, the economy in the Wichita metropolitan area is improving. Employment in the metro area is growing at an above average rate that is driven by strong manufacturing, especially aircraft manufacturing. Personal income growth also has demonstrated signs of improvement. Housing trends remain modest and are expected to stay that way. The Wichita metropolitan area is expected to continue to mirror national and state economic expansion trends. However, the rate of employment growth is expected to lag slightly behind the national rate in the long term.

According to the Center for Economic Development and Business Research (CEDBR) at Wichita State University (WSU), the labor market continues to improve. CEDBR expects employment to increase by 1.6 percent this year. Despite these growth signals, there are several indications of economic weakness. Chief among these are anemic personal income growth, weak retail sales growth, and languishing consumer expectations. In spite of these indications, the economy next year should continue to exhibit growth, but at a modest rate. In 2007, Wichita's overall employment is projected to increase 1.7 percent with the addition of 5,000 jobs. The service sector is expected to increase employment by 2.1 percent with the addition of 2,600 jobs, while the manufacturing sector is forecasted to increase 1.6 percent through the increase of 1,200 jobs.

Despite a projected fourth year of overall employment gains, 2007 employment in Wichita is forecasted to stand 2,900 jobs short of its most recent peak that occurred in 2001. Employment levels for 2007 are not expected to return to pre-recession levels, but some industry sectors are expected to decline significantly. When comparing employment in 2001 to the forecast for 2007, the sectors are a mixture. The production sectors are anticipated to have 10,900 fewer jobs, which is a 12.2 percent decline. Along a similar, but not so drastic line, the trade and transportation sectors are anticipated to have 200 fewer jobs, which is a 0.3 percent decline. Alternatively, the service sectors are

anticipated to surpass 2001 employment levels with a net gain of 6,200 jobs and an increase of 5.1 percent. The government sectors also are anticipated to surpass 2001 employment levels with a net gain of 2,100 jobs and an increase of 5.5 percent.

Wichita's aircraft manufacturing jobs account for more than one-half of the local economy's manufacturing sector. The industry can provide a tremendous boost to the local economy when times are good, but can be potentially disastrous when market conditions are poor. The aviation industry is important not only to Wichita, but Kansas as a whole because manufacturing accounts for nearly one-quarter of all jobs in the Wichita Metropolitan Statistical Area (MSA).

According to CEDBR, aerospace employment is expected to increase at an average rate of 2.4 percent per year from 2006 through 2016 and is forecasted to account for 2.6 percent of all jobs in Kansas. During that same time frame, aerospace payroll is forecast to increase at an average rate of 8.9 percent per year and will account for 6.2 percent of the entire state's payroll. Each aerospace job generates approximately 3.9 total jobs throughout the state based on both the firm's and the employee's spending. Each aerospace wage dollar generates approximately \$2.60 in the state based on both the firm's and the employee's spending. Aerospace employment alone is forecast to generate approximately \$208.0 million in tax revenues in 2006 as a result of direct employment and \$900.0 million in tax revenues in 2006 as a result of total employment. The forecast for 2007 is \$223.0 million and \$1.0 billion, respectively.

According to the Boeing Company's *2006 Current Market Outlook*, the global market for new airplanes will be \$2.6 trillion by 2025. In addition, 27,210 new airplanes will be added, and the fleet will grow from 17,330 to 35,970. Of that fleet, single-aisle airplanes will account for 61.0 percent of all deliveries.

In 2006, Boeing ceased being Wichita's largest employer. With the completion of Onex Corporation's acquisition of Boeing's commercial manufacturing operations in Wichita, Spirit Aero Systems, Inc. was born. As part of the collective bargaining agreement by the Machinists Union, the International Brotherhood of Electrical Workers, and the United Auto Workers with Spirit AeroSystems, approximately 4,000 union members will receive a bonus of up to \$61,440 in cash and stock. The payout is the result of

the Union Equity Program, which is an initial public offering (IPO) of Spirit's stock to union members. The total value of all bonuses is estimated to be nearly \$250.0 million in cash and stock. The bonus plan was in return for union members agreeing to cuts in wages and benefits. Before the end of December, each union member working under the Spirit contract will receive \$34,556 in cash, which is 56.0 percent of the total payout. According to the CEDBR, the cash payouts total approximately \$136.0 million, or 17.0 percent, of December retail sales. In March 2007, qualifying union members will receive the balance of the payout—\$26,884, or 44.0 percent—in stock. They will receive shares of Spirit's Class A common stock at \$26 a share, which was the price of Spirit stock at the opening of its IPO.

According to the General Aviation Manufacturers Association (GAMA) there are over 320,000 general aviation airplanes worldwide, with 219,000 of those airplanes based in the United States. General aviation directly contributes more than \$41.0 billion (\$102.0 billion indirectly) to the U.S. economy annually. In the U.S., general aviation aircraft fly over 28 million hours and carry 166 million passengers annually. The general aviation industry set a new record for billings in 2005, when it realized a 27.2 percent increase over 2004 billings. All segments in the industry—pistons, turboprops, and jets—experienced healthy growth.

In the general aviation sector, deliveries of business jets are expected to be strong over the next decade, according to Honeywell's *2007 Business Aviation Outlook*. Honeywell projects record deliveries for 2006 and 2007, with customers expecting to purchase more than 12,000 aircraft valued at over \$195.0 billion between 2006 and 2016. According to Honeywell, strong new model backlogs, continuing expansion in fractional ownership, and growing international demand are key factors supporting a longer-term outlook for growth. Beyond 2007, the outlook remains strong, with deliveries expected to exceed 1,000 aircraft per year for the balance of the decade with only modest cyclical perturbations.

According to Bombardier Aerospace's *Commercial Aircraft Market Forecast*, demand is anticipated for 11,000 aircraft in the 20 to 149-seat category, representing a total value of \$370.0 billion. The 20 to 149-seat market comprises three segments, including the 20 to 59-seat segment, the 60 to 99-seat segment,

and the 100 to 149-seat segment. The 20 to 59-seat segment powered the development of the regional airline industry and represents a strong base for continued growth. The 60 to 99-seat segment represents the current growth phase for regional airlines as the industry moves toward a more cost-driven focus that is characterized by specialization. Rapid growth in this category supports the drive of regional airlines into larger capacity aircraft.

Economic forces will continue to feed regional airline growth in both network expansion and cost optimization. Much of the cost focus is a result of shrinking yields brought about by the low fare carriers, a relatively new market segment that is growing worldwide. With increasing competition from low fare carriers, mainline airlines are forced toward further specialization in order to reduce costs while maintaining their networks. As a result, mainline carriers will continue to outsource short-haul and low-density routes to lower cost operators, currently represented by their regional airline partners. With this partnership approach, mainline airlines can maintain frequency and schedule on routes that are not cost-effective with their own narrow body equipment.

Significantly, the Machinists Union and Bombardier Aerospace reached an agreement on a new labor contract nearly three weeks after hourly workers in Wichita went on strike in October 2006. This was the first work stoppage in the Learjet plant's history. The new agreement includes a lump-sum bonus of \$1,500; general wage increases of 4.0 percent in the first year of the contract and 3.5 percent in the second and third years; an increase in pension payments; and guaranteed maximum caps on insurance premiums in 2008 and 2009. The agreement also addressed issues surrounding seniority, overtime, and voluntarily working on Sundays.

According to *Kansas Occupational Outlook 2010*, manufacturing jobs in southcentral Kansas are expected to increase by 7,000 by 2010. These jobs are expected to have an annual salary of at least \$40,000. Of those 7,000 jobs, at least 4,000 will need to be filled over the next year in Wichita according to the head of the Wichita aircraft industry's workforce training effort. In an effort to fulfill that need, the Kansas Technical Training Initiative is attempting to convince various governments to provide \$40.0 million to build an aviation technical training center in Wichita. To date, \$7.0 million has been raised for the

project from the state and federal governments and the private sector. The proposed 107,000-square-foot training center will consolidate programs from the area's four community and technical colleges. The proposed center will enroll approximately 500 students in a manufacturing program and approximately 100 students in an avionics program. Plans call for an assessment center, aviation center, and manufacturing center. Sedgwick County plans to issue bonds to cover the cost of construction and use the federal and state grant money to pay off the debt. Almost 21.0 percent of Wichita's jobs—double the national average—is in manufacturing. The five local aviation companies have said that the number of trained workers they will need in 2006 could exceed 4,150 and that 1,000 new jobs will be created every year for the next decade.

On the non-aviation horizon, the city and developers plan to proceed with the next phase of the \$130.0 million WaterWalk development in downtown Wichita. The next phase of the development includes a 60,000-square-foot office building and a multiple-story, multi-use building in the heart of the project. The city is the major source of an already-announced \$30.0 million public investment for WaterWalk infrastructure, the majority of which is being funded by tax increment financing. WaterWalk developers have guaranteed a minimum \$30.0 million investment in the development and future property taxes from that investment will pay off the majority of that financing. Developers say they actually expect to invest closer to \$80.0 to \$100.0 million over the next decade as the project grows.

In addition, Sedgwick County is in the process of finalizing plans for the construction of a new \$184.5 million downtown arena. The new arena will be owned and operated by Sedgwick County. Construction on the arena is expected to begin next year, and it should be available for occupancy in late 2008 or early 2009.

According to the Center for Real Estate (CRE) at Wichita State University, the housing market in Wichita is expected to grow through 2007. CRE expects the existing home market in Wichita to grow 5.4 percent in 2006 and 3.1 percent in 2007. However, the CRE expects the new home market to decrease by 3.2 percent in 2006 and then increase 4.6 percent in 2007.

Topeka Metropolitan Area. Based on place of work data, all industries employment in the Topeka metropolitan area decreased 0.9 percent in 2006. Table 3-2 presents employment in the Topeka metropolitan area for 2005 and 2006.

Table 3-2

Source: Ks Dept. of Labor, Labor Mkt. Info. Service

Employment in the goods producing industries decreased 7.4 percent, while employment in the services producing industries increased by 0.1 percent. Within the goods producing industries, natural resources, mining, and construction employment increased by 1.6 percent, while manufacturing employment decreased by 14.0 percent.

In Topeka's service producing industries during 2006, employment increases were reported in information

(4.2 percent), other services (3.8 percent), finance (1.4 percent), education and health services (1.2 percent), and trade, transportation, and utilities (0.5 percent). Decreases in employment were realized in government (-1.8 percent), as well as professional and business services (-1.2 percent). Farm employment in the Topeka metropolitan area held steady in 2006.

Moody's Economy.com's performance indicators show that Topeka's economic recovery is very sluggish. Much like the local economy lagged the national economy going into the recession, the Topeka economy also has lagged the national economy in recovering. Industrial production remains subdued in Topeka, growing slower than both the state and the nation.

Significantly, United Steelworkers at 16 Goodyear plants in North America went on strike in October 2006, after the union and the company failed to reach a new labor agreement. The Topeka plant has 1,600 employees; 1,300 to 1,400 are members of United Steelworkers. The Topeka plant manufactures radial truck tires; over-the-road tires, including big earth mover tires; and a special two-piece tire for the mining industry. The strike removes approximately \$1.5 million in payroll per week from the Topeka economy. Based on an average pay of \$20 per hour, a Goodyear worker earns \$800 for 40 hours of work. With 1,350 workers on strike in Topeka, that equates to a loss of \$1,080,000 in payroll per week. However, the weekly payroll is higher because many employees were working 48-hour weeks and earning higher overtime wages in order for the company to meet demand for its products.

The Topeka Goodyear facility is reportedly the sole source vendor for High Mobility Multipurpose Wheeled Vehicles (Humvee) tires. The Humvee is a light, flexible, tactical vehicle that is used by all branches of the military. The four-wheel-drive vehicles are in use by the U.S. military in Iraq and Afghanistan. Goodyear announced that it was hiring temporary workers to continue production of certain tire lines, including the Humvee tires.

In addition to payroll, the company spends money with local vendors by buying products and services to support the plant's operations. In 2004, the company reports that it spent \$21.9 million with local vendors, the majority of which was in Shawnee County. According to Goodyear, its total annual salaries and

wages for the Topeka plant are approximately \$175.0 million. This figure includes salaries and wages for management, nonunion, and union members. A strike by Goodyear workers in 1976 lasted four months.

In 2002, the Legislature approved a \$10.0 million incentive for Goodyear to retool the Topeka facility. The money for the state incentive comes from payroll withholding tax from the local Goodyear plant. The incentive money is paid to Goodyear only if it maintains the agreed upon employment at the facility. Another \$750,000 for Goodyear comes from a local option quarter-cent sales tax designated for economic development. If Goodyear closes the local Topeka plant before a ten-year period is up, the company has to repay the sales tax incentive. In conjunction with these incentives, the company has committed to invest more than \$100.0 million in its Topeka plant to upgrade its manufacturing processes over the next five years. Goodyear's new Fuel Max Technology is focused on fuel and tire costs. The Goodyear plant in Topeka is scheduled to produce 7,000 to 8,000 Fuel Max Fuel Efficient Tires per month. In addition to commercial tires, Goodyear Topeka produces earthmover tires, including the Two-Piece Assembly, which won the NorTech Innovation Award in 2004. Two-Piece Assembly production began in 2002.

The Topeka Joint Economic Development Organization (JEDO), which partners with city and county elected officials to administer money from a half-cent, county-wide sales tax, approved an estimated \$125,000 to \$175,000 in incentives for Frito-Lay, Inc. to carry out a planned multimillion-dollar expansion project at its plant in Topeka. The expansion is targeted at creating 50 to 70 new jobs. The money is part of a proposed ten-year incentive package being put together by local and state agencies for Frito-Lay.

Burlington Northern Santa Fe (BNSF) Corp. is constructing another building to handle additional locomotive repairs in Topeka. The new building, which is 225 feet long and 70 feet wide, will increase capacity for service, repair, and routine maintenance of locomotives. Although the new building will not add any new jobs, it is expected to help maintain the jobs that already exist in Topeka. BNSF has 1,204 employees in the offices and shops in Topeka.

In October 2006, Topeka hosted the Sports Car Club of America (SCCA) National Championship Runoffs.

According to the SCCA, more than 700 drivers compete annually in the runoffs, known as the "Super Bowl" of amateur road racing. The event, which is in its 43rd year, took place near Lexington, Ohio, before moving this year to Heartland Park Topeka. The Topeka track has a three-year contract to host the event through 2008. Racers qualified to compete in the runoffs by earning a specific number of points at SCCA-sanctioned events. Past SCCA racers have included actors Paul Newman and Tom Cruise, as well as members of the Andretti, Unser, and Rahal racing families. A Washburn University study conducted in 2004 estimated that if the runoffs were brought to Topeka, the annual economic effect on Shawnee County would be more than \$11.2 million.

Stormont-Vail Health Care completed its new cancer center in the fall of 2006. The 30,000-square-foot, \$13.0 million facility consolidates the hospital's cancer treatment facilities into one place.

Even though the Topeka housing market is slowing, house-price appreciation will only slow slightly because housing prices in the area were never driven up to speculative highs. Therefore, no adjustment is expected because of earlier overpricing. According to the Coldwell Banker Home Price Comparison Index, Topeka has the fifth lowest housing cost out of 342 "moderate to large" metropolitan areas in the country. The index compares the selling price of a 2,200-square-foot home in a middle-class neighborhood with four bedrooms, 2 1/2 bathrooms, and a two-car garage. Topeka was seventh on the list last year, but moved up after the average price fell slightly from \$151,562 to \$148,050. This compares with \$200,000 in Kansas City, Missouri and \$247,000 in Lawrence.

According to Moody's Economy.com, Topeka's long-term growth potential is limited by several constraints. Most notably, the area lacks a dynamic growth driver. Topeka is a service economy that thrives on the spending patterns of its residents, which makes it unattractive for migrating businesses to relocate there. Furthermore, the area exhibits middling demographic trends that show no sign of improvement. Lacking both expected population growth and dynamic industrial growth, Topeka will be hard-pressed to find meaningful economic growth in the long term.

Moody's Economy.com also suggests that the near-term outlook for the Topeka economy looks austere.

The strike at Goodyear has already produced a measurable effect on the local economy. A prolonged strike threatens to destabilize support industries further, such as retail trade and health care.

Lawrence Metropolitan Area. Based on place of work data, all industries employment in the Lawrence metropolitan area increased 2.5 percent in 2006. Employment in the goods producing industries increased 2.9 percent during that same time frame, and employment in the services producing industries increased by 2.4 percent. Within the service producing industries, employment in professional and technical services increased by 12.5 percent, while trade, transportation, and utilities increased by 6.1 percent. Alternatively, leisure and hospitality decreased by 3.0 percent, education and health service employment decreased by 1.6 percent, and government decreased by 1.4 percent. Farm employment remained constant in the Lawrence metropolitan area in 2006. Table 3-3 presents employment in the Lawrence metropolitan area for 2005 and 2006.

Table 3-3

Lawrence Metropolitan Area Employment Douglas County October 2005-October 2006			
	2005	2006	% Chg.

Farm Employment	1,000	1,000	--

Source: Ks Dept. of Labor, Labor Mkt. Info. Service

According to Moody's Economy.com, Lawrence's economy is exhibiting considerable volatility, which is evidenced by the inability of the area to produce sustained employment growth. Retail trade is rebounding from its slowdown over the past two years

and is the only industry to experience steady growth in recent months. Furthermore, there has been a sharp contraction in leisure/hospitality recently.

Although the housing market in the Lawrence area has experienced tremendous growth over the past several years and pushed average home prices up to nearly \$250,000, the housing market is deteriorating because of oversupply and the weakening national market. Moody's Economy.com suggests that the excess supply of single-family homes has been building up in the area over the past four years and the build up is finally being reflected in house prices. Housing price growth has dropped below a 3.5 percent year-over-year rate, which is the lowest rate in more than 10 years. Accordingly, single-family building permits have fallen by approximately 30.0 percent from a peak earlier in the year.

Moody's Economy.com concludes that the Lawrence economy is expected to track the nation over the near term. Business/professional and leisure/hospitality services will drive employment growth. Because the Lawrence economy is not highly diversified, this is further contributing to its weakening demographic trends.

Kansas City, Kansas Metropolitan Area. Because of changes in statistical reporting areas, Kansas City, Kansas is now regarded as a separate statistical area. The area includes Franklin, Johnson, Leavenworth, Linn, Miami, and Wyandotte Counties. Employment by place of work in the Kansas City, Kansas metropolitan area increased 0.5 percent in 2006. However, employment in goods producing industries decreased 0.2 percent, while employment in service producing industries increased 0.6 percent.

Within the goods producing industries, durable goods manufacturing employment increased 1.0 percent, while non-durable goods manufacturing employment remained unchanged. Within the service producing industries, other services employment increased 2.6 percent, while education and health services increased 2.5 percent. Both professional and technical services and government increased 2.1 percent, while leisure and hospitality services increased 1.1 percent, and financial activities increased 0.7 percent. Decreases were realized in trade and transportation employment (-2.3 percent) and information employment (-1.8 percent). Farm employment in the area increased 1.4

percent in 2006. Table 3-4 presents employment by place of residence for the Kansas City, Kansas metropolitan area.

Source: Ks Dept. of Labor, Labor Mkt. Info. Service

According to Moody's Economy.com growth in the Kansas City economy has weakened recently because payrolls in most service industries have plateaued. Service payrolls remain above last year's levels, but

they have been almost flat recently. The professional/business services industry has been one of the strongest performers in this metro area of late. The manufacturing sector continues to lose jobs, thus weighing on the metro area's performance. Moreover, Kansas City's slowing housing market is also a drag on the local economy because of the area's above-average concentration of housing-related employment.

Ongoing restructuring among U.S. auto manufacturers will continue to be an impediment on the Kansas City economy. The auto industry's high wages have been an important support for incomes and spending in the metro area. Therefore, there is risk that further job cuts at Ford and GM will further weaken Kansas City's ailing manufacturing sector.

Ford shut down its Claycomo, F-150 truck production for one week in September and two weeks in October. The facility also is scheduled to be closed for one week in January 2007, and one week in February 2007. Approximately 2,400 local Ford employees are expected to be temporarily furloughed during these periods. However, under the United Auto Workers bargaining agreement, members laid off because of slow sales receive benefits from a company-union fund, as well as state unemployment compensation. These combined sources are expected to cover approximately 90.0 percent of the average worker's take-home pay. Production of the Ford Escape and Mercury Mariner at Claycomo will continue because consumer demand is good. However, periodic Saturday shifts that the SUV line had already scheduled will be eliminated immediately. Approximately 2,400 people work on the SUV line, but the overall employment at the Claycomo plant is 5,100 employees.

Ford recently announced that by 2012, it plans to eliminate more than 30,000 hourly jobs, close 14 North American plants, and reduce its salaried work force by the equivalent of 4,000 jobs. Ford has not named all the plants to be closed in its downsizing. The Claycomo plant avoided the first round of plant closings originally announced in January 2006.

In addition, the Ford Motor Co. is expanding its early retirement and buyout offers to all hourly workers and making the offers more lucrative to entice employees to leave. This means that approximately 4,800 hourly employees at Ford's Claycomo plant will again have a

chance to accept an early retirement or cash-buyout offer. Nearly 1,500 production workers at Ford Motor Co.'s Claycomo plant already have accepted the latest offer to leave the troubled automaker, although the positions are expected to be refilled. The departures are expected to begin in January 2007 and will be spread through September 2007. If all the local employees who accepted the latest offer leave, nearly 2,100 of Claycomo's 4,900 hourly employees will have left Ford from mid-2006 through September 2007. That equates to 43.0 percent of the workforce. The employees who accepted the latest buyout or early retirement could change their minds anytime before their departure date. Although a large portion of the current workforce is leaving, Kansas City's workforce is expected to remain static because those leaving are being replaced by transferring workers.

Ford originally offered five different separation packages, including three early-retirement packages. The most popular early-retirement option was a \$35,000 lump-sum payment for anyone with 30 years of service who are retiring with full benefits. The cash buyout option offered a \$100,000 lump-sum payment for any hourly Ford employee, along with six months of basic medical benefits. Retirement-eligible Ford employees who select this option must delay receiving retirement benefits for at least 23 months after leaving. The remaining package would pay departing workers' tuition up to \$15,000 annually and one-half of their hourly pay for up to four years if they return to school or a vocational training program.

Subsequently, Ford added three more offers in its expanded program, including an education benefit that goes up to two years. The tuition payment is the same, but workers taking this package will receive 70.0 percent of their pay while attending school. Another offer is an enhanced cash buyout of \$140,000 with benefits, the same as the \$100,000 plan. In this offer, employees must have 30 years of service or be age 55 with 10 years of employment to be eligible. The final package with the newest twist is called the "Family Scholarship Program." This option is available to departing, retirement-eligible employees. If chosen, this option will allow them to receive a \$100,000 account to be used for approved educational expenses for spouses and children.

A survey conducted by the engineering trade publication, *Engineering News-Record* (ENR) identi-

fied the Kansas City area as a national hub for engineering. Four local firms were ranked in the top 50, including Black & Veatch (15), HNTB Corp. (25), Burns & McDonnell (35), and Terracon (50). Seven others were included on the overall list. The survey underscored the importance of Kansas City as a national center for engineering and emphasized the major contribution that concentration of professionals makes to the local economy. In 2005, the metropolitan area employed 7,800 engineers of all stripes and 2,700 engineering technicians, according to the U.S. Bureau of Labor Statistics. With the average salary for a local engineer ranging from \$60,000 to \$75,000, the combined earnings of those professionals are more than \$665.0 million.

Burlington Northern-Santa Fe Railroad (BNSF) has announced plans to build the BNSF Intermodal and Logistics Park in Gardner, Kansas (southwest Johnson County). The Park will be a \$1.0 billion freight hub and warehouse complex. Under the railroad's plan, trains would be unloaded at the site, with the goods stored on-site or trucked to other destinations. BNSF has acquired 800 of the 1,000 acres needed for the Park and will invest \$200.0 million for the intermodal facility. An economic study shows the distribution center would represent a \$650.0 million investment when fully built over a 20-year period. The entire facility will create 13,000 jobs in the state over a 20-year period. Of the 13,000 total, approximately 7,500 jobs will be in Gardner, 4,500 will be in other areas of Johnson County, and 1,000 will be in the Kansas City metro area. Construction could start in 2007 after land acquisition and permitting. The facility is expected to be operational in 2008.

The growth and development of Kansas City, Missouri's downtown area earned the city top honors as the recipient of the National Civic League's All-America City award for 2006. Awarded since 1949, the program is designed to recognize communities of all sizes in which residents, businesses, not-for-profit organizations, and government officials work together to address critical local issues. A major factor in the rebound of the Kansas City core area is more than \$2.4 billion of current and planned investment in the downtown area. Kansas City's downtown revival is anchored by the Sprint Center, the Power & Light District (nightlife), the Kauffman Center for the Performing Arts, and a new ballroom at Bartle Hall. The new \$280.0 million Kansas City Live entertain-

ment district is anchored by the \$120.0 million H&R Block 14-story downtown corporate headquarters, which opened in August 2006. Across the street, construction is beginning on the mammoth Power & Light District project being developed by The Cordish Co., based in Baltimore, Maryland. Two blocks to the east, huge support girders rise from the Sprint Center Arena, scheduled to open in October 2007. In October 2006, groundbreaking was held for the \$326.0 million Kauffman Metropolitan Kansas City Performing Arts Center. Plans call for two 1,600-seat halls, one for symphonic music, the other for opera and ballet, along with a multipurpose facility called Celebration Hall. In addition, the city has pledged \$47.0 million to build two parking garages for the complex. Construction of the new arena will be financed with a combination of \$276.0 million in private and public financing. Major contributors include the Anschutz Entertainment Group (AEG) (\$54.0 million), the National Association of Basketball Coaches (\$10.0 million), and Sprint, which has purchased naming rights for up to \$2.5 million per year. Public contributions will come from a new hotel and rental car fee.

Kansas City also has a future National Hockey League franchise for the Sprint Center. Now all it needs is a team when the downtown arena is scheduled to open in October 2007. William "Boots" Del Biaggio III, the founder of a Menlo Park, California, venture-finance company, has entered into a long-term lease with the Sprint Center to own and operate an NHL team if one becomes available through expansion or relocation. As part of his lease with the Sprint Center, Del Biaggio will have an option to buy in as a 50-50 partner in the management of the building. The lease calls for a rental payment to the building. In return, Del Biaggio will receive a share of revenue streams from the building.

All 72 private suites have been sold in the Sprint Center, which will seat 17,297 for hockey and 18,630 for basketball. AEG also has identified 3 of the first 12 founding partners, who will have exclusive advertising rights in the arena. The Big XII men's NCAA basketball tournament is scheduled to be played at the Sprint Center in 2008. First-round and second-round games of the NCAA men's basketball tournament will be played at the Sprint Center in 2009, and the NCAA women's regional semifinals and finals will be played there in 2010. AEG's lease with Del Biaggio does not rule out the Sprint Center from

looking for a team from the National Basketball Association, which has several franchises dealing with arena issues, including the teams in Sacramento, Milwaukee, Portland, and Seattle.

In April, Jackson County voters approved a Truman Sports Complex overhaul, but rejected a rolling roof. The \$575.0 million stadium renovations were the first priority, locking the Chiefs and Royals into Kansas City for years to come. The renovations passed with 53.0 percent of the overall vote. The roof garnered only 49.0 percent of the vote. Jackson County officials held the election because the government had run out of money to fulfill the 1990 leases that mandate "state-of-the-art" stadiums. Without passage of the vote, the county would have defaulted on the leases at the end of the year, which would have allowed the teams to look for new locations. Now the teams are committed at the stadiums until 2031.

The decision will impose a 3/8-cent sales tax to raise \$425.0 million that will be used to overhaul Arrowhead and Kauffman Stadiums. In addition, the Chiefs are contributing \$75.0 million and the Royals will contribute \$25.0 million. State officials have agreed to provide \$50.0 million in tax credits. The teams' contributions will cover all costs associated with suites, and the teams will pay cost overruns. With the renovations, concourses will more than double in width, and hundreds of restrooms and concession stands will be added. Food options will expand, including more specialty offerings at Arrowhead and a food court and restaurant at Kauffman. Arrowhead will receive a new Chiefs store and a museum. Kauffman will add a 9,500-seat, open-air pavilion.

The Big XII football championship was held in Arrowhead Stadium in November 2006. The economic effect of this championship is estimated to be as much as \$25.0 million. For a sporting event in Kansas City, that makes it second only to the \$150.0 million produced by the two racing weekends at Kansas Speedway. Most of the 26,500 rooms in the five-county area were filled for portions of the weekend, especially on Saturday night.

The Kansas City area also is seeing the continued development of specialty and entertainment centers, some of which include Zona Rosa in the Northland area, the Bass Pro Shop in Independence and Olathe,

and the Legends, which is located in Village West adjacent to the Kansas Speedway in Wyandotte County. In five years, Wyandotte County has more than doubled its hotel rooms, retail outlets, and other venues. Beyond bring entertainment to the area, these developments have generated nearly 3,500 jobs in Wyandotte County.

According to a story reported in the *New York Times*, Olathe, Kansas showed the biggest jump in the percentage of people paying at least 30.0 percent of their income on rent, as well as in those paying at least 50.0 percent on rent. In the last five years, the average price for a new home has doubled to approximately \$350,000. The city has added more than 30,000 jobs in the last five years. Since 2000, the portion of the city's population paying more than 35.0 percent of its income to rent grew to 42.0 percent from 19.0 percent.

Kansas & Adjacent States Metro Areas' Employment Trends

This section presents employment trends through October 2006 by major industry types for the region that includes Colorado, Kansas, Missouri, Nebraska, and Oklahoma. In 2005, the Office of Management and Budget (OMB) updated Census 2000-based statistical areas using population estimates for 2003. Relative to the 1990s, the updated lists added 49 new Metropolitan Statistical Areas while revising definitions of existing Metropolitan Statistical Areas. The list also identified for the first time 578 Micropolitan Statistical Areas. Additionally, the OMB designated and defined two new sets of statistical areas that include 125 Combined Statistical Areas and 25 Metropolitan Divisions in the most populous Metropolitan Statistical Areas. New England City and Town Areas also are defined as an alternative to the county-based metropolitan and micropolitan areas in the six New England states.

The OMB is responsible for maintaining and updating statistical area classifications, a task it has accomplished every decade since the 1950 census. The OMB establishes and maintains the definitions of these areas solely for statistical purposes. The classification is intended to provide nationally consistent definitions for collecting, tabulating, and

publishing federal statistics for a set of geographic areas. Table 3-5, which is shown on the next page, presents employment growth rates for the 23 metropolitan areas in the five-state region from October 2005 through October 2006. The additional metropolitan areas listed in this table are the result of the new OMB definitions.

Employment by Industry Type

Total nonfarm employment in the major labor markets in the five-state area increased 1.2 percent from October 2005 to October 2006. Grand Junction, Colorado led the five-state area in employment growth with a growth rate of 5.7 percent. It was followed by Pueblo, Colorado with a growth rate of 3.2 percent, and Greeley, Colorado with a growth rate of 2.7 percent. Out of the 23 major markets in the five-state area, Lawrence ranked fourth with a growth rate of 2.5 percent and Wichita ranked 9th with a growth rate of 1.8 percent. Although Kansas City, Kansas experienced a 0.5 percent employment decrease, it still ranked 18th in the five-state area. Topeka was ranked last in the entire region with a 0.9 percent employment decrease.

Construction & Mining. Total construction and mining employment in the major labor markets in the five-state area increased 3.7 percent in 2006. Grand Junction, Colorado led the five-state area in employment growth with a growth rate of 20.0 percent. It was followed by Greeley, Colorado with a growth rate of 10.9 percent, and Kansas City, Missouri with a growth rate of 8.5 percent. Out of the 23 major markets in the five-state area, Wichita ranked eighth with a growth rate of 4.4 percent, and Topeka ranked 14th with a 1.6 percent growth rate. Although Kansas City, Kansas realized a 1.3 percent decrease in employment, it still ranked 16th.

Manufacturing. Manufacturing employment in the major metropolitan areas in the five-state region decreased at an average rate of 1.3 percent in 2006. However, Wichita led the five-state area with 2.9 percent growth in manufacturing employment, followed by Pueblo, Colorado with 2.5 percent growth, and Tulsa, Oklahoma with 2.3 percent growth. Kansas City, Kansas ranked sixth in the five-state area with manufacturing employment growth of 0.6

percent. Although Topeka ranked 19th, it realized a 14.0 percent decrease in manufacturing employment.

Trade, Transportation, & Public Utilities. Trade, transportation, and public utilities employment in the major metropolitan areas in the five-state region increased 0.4 percent in 2006. Lawrence led the five-state area with a 6.1 percent increase in trade, trans-

portation, and public utilities employment growth. It was followed by Pueblo, Colorado with a 3.7 percent growth rate, and Grand Junction, Colorado with a 3.2 percent growth rate. Topeka ranked 13th with a growth rate of 0.5 percent. Decreases were realized by Wichita with -0.2 percent growth and Kansas City, Kansas with -2.3 percent growth. Even with these declines in trade, transportation, and public utilities

employment, these two metropolitan statistical areas still managed to rank 19th and 23rd, respectively.

Information. Information employment in the major metropolitan areas in the five-state region decreased 3.0 percent in 2006. Lawton, Oklahoma had the highest growth rate in the five-state area at 25.0 percent, followed by Topeka with a 4.2 percent growth rate, and Pueblo, Colorado with information employment remaining steady. Although they realized decreases in information employment, Kansas City, Kansas still ranked ninth (-1.8 percent) and Wichita ranked 17th (-8.5 percent).

Financial Activities. Financial activities employment in the major metropolitan areas in the five-state region increased 1.1 percent in 2006. Within the five-state region Lincoln, Nebraska experienced the highest growth in financial activities employment at 6.3 percent, followed by Lawton, Oklahoma with 4.0 percent growth, and Grand Junction, Colorado with 3.0 percent growth. Topeka ranked eighth (1.4 percent), Wichita ranked 10th (0.9 percent), and Kansas City, Kansas ranked 11th (0.7 percent).

Professional & Business Services. Professional and business services employment in the major metropolitan areas in the region increased 2.1 percent in 2006. Pueblo, Colorado had the highest growth rate in professional and business services employment in the five-state area at 25.6 percent, followed by Grand Junction, Colorado at 13.7 percent and Lawrence, Kansas at 12.5 percent growth. Wichita ranked ninth in the five-state area (3.0 percent), while Kansas City, Kansas ranked 12th (2.1 percent), and Topeka ranked 19th (-1.2 percent).

Education & Health Services. Education and health services employment in the major metropolitan areas in the region increased 1.7 percent in 2006. Omaha, Nebraska/Council Bluffs, Iowa had the highest growth rate in education and health services employment at 4.4 percent, followed by Springfield, Missouri at 4.1 percent and Fort Collins/Loveland, Colorado at 3.6 percent. Wichita ranked fourth in the five-state area (3.2 percent), while Kansas City, Kansas ranked ninth (2.5 percent), Topeka ranked 15th (1.2 percent), and Lawrence ranked 20th (-1.6 percent).

Leisure & Hospitality Services. Leisure and hospitality services employment in the major metropolitan areas in the region increased 2.5 percent

in 2006. Greeley, Colorado had the highest growth rate in leisure and hospitality services employment at 7.6 percent, followed by Omaha, Nebraska/Council Bluffs, Iowa with 6.0 percent growth. Colorado Springs, Colorado followed with 4.3 percent growth. Wichita ranked 12th (1.6 percent), while Kansas City, Kansas was ranked 14th (1.1 percent), Topeka ranked 17th (no change), and Lawrence was ranked 19th (-3.0 percent).

Other Services. Other services employment in the major metropolitan areas in the five-state region increased 0.4 percent in 2006. Grand Junction, Colorado had the highest growth rate in other services employment at 4.5 percent, followed by Wichita at 4.1 percent, Topeka with a 3.8 percent growth rate, and Kansas City, Kansas with a 2.6 percent increase in other services employment.

Government. Government employment in the major metropolitan areas in the five-state region increased 1.6 percent in 2006. Tulsa, Oklahoma experienced the highest growth in government employment with a 4.7 percent growth rate. It was followed by Grand Junction, Colorado with a 4.5 percent growth rate and Joplin, Missouri with a 4.1 percent growth rate. Kansas City, Kansas ranked eighth (-2.1 percent), Wichita ranked 16th (-0.7 percent), Lawrence ranked 20th (-1.4 percent), and Topeka ranked 22nd (-1.8 percent).

Regional Labor Market Employment

The civilian labor force increased in seven of the state's eleven secondary labor markets during 2006. Reno County experienced the highest rate of increase at 4.1 percent. It was followed by Barton County with a 3.3 percent growth rate. Montgomery County came in next with a 2.7 percent increase. During that same time period, decreases in the civilian labor force were experienced in Ellis County (-5.1 percent), Finney County (-2.7 percent), and Saline County (-0.2 percent) County. In keeping with the growth in the civilian labor force, employment increases were experienced in nine of the state's secondary labor markets in 2006. Again, Reno County experienced the highest rate of growth at 5.1 percent, followed by Barton County at 3.7 percent, and Montgomery County at 3.0 percent. Most significantly, all of the state's 11 secondary labor markets experienced a

decrease in their respective unemployment rates in 2006. Reno County experienced the largest decrease of 0.9 percentage point, followed by Lyon County with a 0.8 percentage point decrease, and Saline County with a 0.7 percentage point decrease. Table 3-6 on county employment, which is shown above, presents employment trends for the 11 selected counties from October 2005 to October 2006.

County Personal Income

Both the levels and the components of personal income are important in understanding local

economies. Because of this importance, county personal income is presented in this section.

Total Personal Income

Total personal income in Kansas grew at a 5.7 percent rate in 2005. Johnson County generated the highest level of personal income with \$24.2 billion, followed by Sedgwick County with \$16.7 billion. Shawnee, Wyandotte, Douglas, Leavenworth, Reno, Butler, Riley, Saline, and Harvey Counties each generated over \$1.0 billion of personal income in 2005. The lowest levels of income were recorded in Cheyenne, Comanche, Greeley, Wallace, Clark, Lane, and Logan

Counties, each with less than \$50.0 million in total personal income.

The highest growth rates of personal income in 2005 were experienced in Stanton (59.1 percent), Geary (30.7 percent), and Coffey (21.6 percent) Counties. At the other extreme, Cheyenne County experienced a 41.7 decline in personal income. It should be kept in mind that these rates of change may be distorted by erratic fluctuations in the farm economy.

Of the state's major urban counties, Wyandotte County had the highest personal income growth in 2005 at 15.3 percent, followed by Shawnee County (8.3 percent), Sedgwick County (7.7 percent), and Johnson County (4.9 percent). Appendix D presents county personal income by major components for 2004. Appendix E shows county personal income estimates by major components for 2005. Figure 3-1, which is shown on page 47, presents the percent change in county personal income from 2004 to 2005.

Salaries & Wages. Salaries and wages are distributed across the state in a pattern that generally corresponds to population. The areas with higher population density generally have higher total salaries and wages. Salaries and wages in Kansas grew at a 4.0 percent rate in 2005. Johnson County and Sedgwick County ranked first and second, with salaries and wages of \$13.5 billion and \$9.5 billion, respectively. Shawnee and Wyandotte Counties each generated over \$3.0 billion of salaries and wages in 2005. During that same year, Hodgeman and Wallace Counties had the lowest salaries and wages total with less than \$15.0 million each.

Other Labor Income. While the correlation between salaries and wages disbursements and other labor income is not exact, the two are closely related. County rankings are nearly the same for both components. Other labor income in Kansas grew at a rate of 8.2 percent in 2005. Johnson County ranked first with \$3.3 billion in other labor income, followed by Sedgwick County at \$2.9 billion. At the other end of the spectrum, Wallace, Hodgeman, Greeley, Comanche, and Woodson Counties realized other labor income of less than \$5.0 million.

Farm Proprietors' Income. The relative importance of farm proprietors' income, as a component of total personal income, varies among the 105 Kansas

counties. While there are many measured components of farm owners' income, the major determinants are farm production of crops and livestock, profitability of farm operations, and federal government payments to farmers. Farm proprietors' income is larger and out of proportion in agriculturally-oriented counties because of large-scale production, high profitability, and government support payments. In 2005, farm proprietors' income surged 51.2 percent. Haskell County had the highest farm proprietors' income in 2005 (\$65.5 million), followed by Marshall County (\$61.2 million), and Nemaha County (\$61.1 million).

Non-farm Proprietors' Income. The net earnings of unincorporated business owners constitute non-farm proprietors' income. County size also is a major determinant in the distribution of this income component. Non-farm proprietors' income grew at an 8.2 percent rate in 2005. Johnson County had the highest level of non-farm proprietors' income at \$2.9 billion followed by Sedgwick County with \$1.9 billion. Hodgeman, Greeley, Washington, Stanton, Lane, and Kearney Counties had the lowest with less than \$5.0 million of non-farm proprietors' income each.

Dividends, Interest, & Rent. Dividends, interest, and rent increased by 6.4 percent in 2005. This category represents a large component of personal income in Johnson County. In fact, the \$4.3 billion of dividends, interest, and rents in that county account for nearly 30.0 percent of the state total. Sedgwick County also had over \$2.4 billion of dividends, interest, and rent. Only Greeley and Wallace Counties had less than \$10.0 million in dividends, interest, and rents in 2005.

Transfer Payments. Transfer payments in Kansas grew at 6.5 percent rate in 2005 and are largely social security benefits. The distribution of transfer payments across the state generally reflects county population. Collectively, the state's four urban counties received over \$5.0 billion in transfer payments, while Greeley, Wallace, and Stanton Counties each received less than \$10.0 million.

Residence Adjustment. Because personal income is measured on a residence basis, an adjustment must be made for out-of-county earnings. A residence adjustment is made for salaries and wages, other labor income, and for both farm and nonfarm proprietors' income. The residence adjustment for Kansas increased 10.0 percent in 2005. For the state as a

whole, the 2005 residence adjustment was \$840.3 million. The positive value indicates that, in total, Kansans earn more income out-of-state than income earned by non-Kansans in Kansas.

Within Kansas, four situations are present that relate to residence adjustment. First, for most counties, this component is relatively small. Second, there are considerable earnings by Riley County residents in Geary County. These earnings are associated with Fort Riley. The third situation relates to out-of-county earnings provided in two of the large Kansas counties. For example, the Sedgwick County residence adjustment is negative (-\$638.2 million.) Most of this income appears in bordering counties. For neighboring Butler County, the adjustment is positive (\$390.9 million). Thus, Sedgwick County provides earnings and jobs for Butler County residents. A similar situation exists for Shawnee County. The final situation exists in the Kansas City area. The Wyandotte County residence adjustment is negative (-\$701.5 million), indicating that the county provides net earnings for residents of other counties and perhaps for Missouri residents. Johnson County is unique in that its residence adjustment is positive (\$672.4 million) and nearly equal to the state's overall residence adjustment of \$840.3 million. Besides providing jobs for residents of bordering counties, even larger earnings of Johnson County residents come from the Missouri side of the Kansas City area.

Personal Social Insurance Contributions. Personal contributions for social insurance in Kansas grew at a 9.1 percent rate in 2005. Because of the definition of the social security tax base, personal contributions for social insurance are closely related to the distribution of salaries and wages, as well as positive proprietors' income. Personal contributions for social insurance exceeded \$500.0 million in each of the state's four major urban counties during 2005. Johnson County's contributions totaled \$2,222.5 million and Sedgwick County's were \$1,567.2 million. Shawnee followed with contributions of \$566.8 million and Wyandotte had \$531.1 million.

Per Capita Personal Income

Per capita income for each county may be obtained by dividing the total personal income of the county by the total population of the county. The population data used for these calculations were estimates of county

population as of July 1, 2005, based on the U.S. Bureau of the Census' *Current Population Reports*. Figure 3-2, which is shown on page 47, presents per capita personal income by county for 2005.

In 2005, Kansas per capita income was \$32,948. Stanton County had the highest per capita income (\$48,398), followed by Johnson County (\$47,747), and Geary County (\$46,768). The lowest per capita income was in Cheyenne County (\$9,807). It should be noted that county per capita income may fluctuate dramatically from year to year because of the inherent volatility of the farm economy, coupled with the relatively low population in many rural counties.

The relatively low-income counties in rural Kansas generally tend to have a high reliance on the farm economy. Specifically, these counties have a negative, or low, farm proprietors' income. In the eastern half of the state, particularly the southeastern portion of Kansas, low-income counties are primarily those that have relatively high population densities, but are not part of major urban areas.

The counties with high per capita incomes are associated with two conditions. First, most relatively high per capita income counties are rural and agricultural and, for the most part, are in the southwestern part of the state. Second, three of the state's major urban counties have high per capita incomes. This income influences not only the core county of the metropolitan area, but also many bordering counties that provide the place of residence for individuals who are employed, but may not live in the core counties.

The Four Urban Counties

In Kansas, it also is important to examine personal income levels and related components for the state's four urban counties. These counties are Sedgwick, Johnson, Wyandotte, and Shawnee.

Total Personal Income

In 2005, Johnson, Sedgwick, Shawnee, and Wyandotte accounted for 47.4 percent of the state's population and 56.6 percent of the state's total personal income.

This indicates that per capita income is higher in the four urban counties than in the state as a whole. Wyandotte County per capita income (\$28,139) is significantly below the state average (\$32,948), while Sedgwick County (\$35,848) and Shawnee County (\$34,206) are both slightly above the state average. Johnson County (\$47,747) is 44.9 percent above the state average. For the four urban counties, the average per capita income is \$39,342, or 19.4 percent, higher than the state average.

These four counties generate 63.2 percent of non-farm proprietors' income; 62.7 percent of Kansas' salaries and wages; 62.5 percent of personal contributions for social insurance; 60.1 percent of the other labor income; 56.1 percent of dividend, interest, and rent income; and 44.5 percent of Kansas' transfer payments. Only for farm proprietors' income and residence adjustment do these four counties sum to a small share of the Kansas total. Johnson or Sedgwick rank either first or second among the 105 counties in most income components, as well as total income. Shawnee and Wyandotte rank third and fourth.

Regional Personal Income

Because boundaries of economic activity do not necessarily respect political boundaries, comparisons of county income do not necessarily provide an accurate measure of the economic performance of a geographic area. Income that is concentrated in a small area is subject to greater variability than is income spread over a wide area. For example, personal income measures the income received by individuals on the basis of their residence location and is not directly concerned with the location of earnings. Thus, a residence adjustment is necessary for each county for two reasons. First, the residence adjustment is necessary to account for inter-county commuting to work. Second, it is necessary to account for some income components, such as farm proprietors' income, where the location of the residence may be far removed from the location of the income generation.

An additional problem exists for states such as Kansas where farm income is sizeable. Extreme fluctuations in small-area farm earnings occur particularly because

of variable weather conditions and the changing location of farm products marketing.

County data provide helpful insights because they may be aggregated over larger regions. For this report, Kansas has been divided into 11 planning regions, which may be considered the "official" aggregation. Figure 3-3, which is shown on page 48, presents total personal income by region for 2004 and 2005, while Figure 3-4, also shown on page 48, presents the percent change in total personal income by region from 2004 to 2005 and per capita income for 2005.

In terms of total personal income, the 2005 average for the 11 regions is \$7.8 billion. Region I, which surrounds Kansas City, has the highest level of personal income with \$40.1 billion. The only other region that is above the average total personal income per region is Region IV, which surrounds Wichita. That region had total personal income of \$22.2 billion in 2005. The lowest personal income was realized in Region VIII in northwest Kansas at \$721.6 million.

Generally, regional population rankings correspond to regional personal income rankings. High incomes are associated with large populations. Thus, population and personal income are highly concentrated in the state. Accordingly, 72.8 percent of the total personal income is located in Regions I and IV. Less than 1.0 percent of the state's total is located in Region VIII.

Recent income and population growth have been uneven across Kansas. In 2005, total personal income rose by 5.7 percent across the state. The most rapid growth was in Regions XI, III, and VII with 9.3 percent, 6.4 percent, and 6.2 percent growth, respectively. Region VIII experienced a decrease in personal income in 2005 (-3.5 percent).

In terms of per capita personal income, Region I ranked first (\$37,509), followed by Region IV (\$32,948). Region VIII, in northwest Kansas, had the lowest per capita income (\$23,556). The extent of the inequality in regional income is evident because a 59.2 percent difference exists in per capita income from the highest income region to the lowest income region. This is significant by any measure.

(Dollars in Millions)

**Figure 3-4. Percent Change in Total Income, 2004 & 2005,
 & 2005 per Capita Income, by Region**

Overview

The U.S. Census Bureau reported that the nation's population reached the historic milestone of 300 million people on October 17, 2006, at approximately 8:46 a.m. (CDT). This milestone comes almost 39 years after the national population reached the 200 million mark on November 20, 1967.

According to the Census Bureau, this estimate is based on the expectation that the United States registers one birth every 7 seconds and one death every 13 seconds, while net international migration is expected to add one person every 31 seconds. The result is an increase in the total population of one person every 11 seconds.

When the national population reached the 300.0 million milestone, Kansas had a total population of 2,744,687, which represents only 1.1 percent of the total national population. This figure was certified on July 1, 2006. By state statute (KSA 11-201), the official population of Kansas is certified from the latest estimates released by the United States Bureau of the Census. As of April 1, 2000, the Kansas population was 2,688,418. On July 1, 2006, the population for calendar year 2005 was certified at 2,744,687. This certification serves as the official population of the state. The certified population for Kansas, all counties, and townships for 2006 is shown in Appendix F.

As the population in Kansas continues to increase, the cities with populations of more than 5,000 are realizing the greatest proportion of the increase. Historically, Kansas has been predominantly rural. However, that trend is changing. Of the 626 cities in Kansas, 58 have populations that exceed 5,000; 568 have populations of less than 5,000; and 429 have populations of less than 1,000 people. The total population of all cities in Kansas is 2,234,228, which represents 81.4 percent of the total population.

Of the 20 largest cities in Kansas, 5 have populations that exceed 100,000, including Wichita (354,865), Overland Park (164,811), Kansas City (144,210),

Topeka (121,946), and Olathe (111,334). These cities are all located in the eastern half of the state. The western half of Kansas encompasses 5 of the 20 largest cities in Kansas, including Salina (45,956), Garden City (27,098), Dodge City (26,104), Liberal (20,257), and Hays (19,632). Of these five cities, only Liberal's populations increased over the last year.

The population that resides in the unincorporated, or rural, areas in Kansas totals 510,459, which has increased 6,829 since 2004. Also, there are 429 cities with populations of less than 1,000 people. These 429 cities have a total combined population of 133,499, which is 763 less than last year. The unincorporated areas, when combined with cities with populations of less than 1,000 people, account for 23.5 percent of the total population. This is a slight increase from last year's level of 23.3 percent of the total population. In 2000, 24.3 percent of the total population resided in unincorporated areas and cities of less than 1,000 people.

There are 568 cities in Kansas that have a population of less than 5,000 people. These cities have a total population of 431,867, which is 1,599 fewer people residing in this category of cities than last year when the total population was 433,466. When the total population of these cities is combined with the rural areas, 34.3 percent of the total population is represented. Last year, 34.4 percent of the total population resided in rural areas and cities with populations of less than 5,000.

According to the U.S. Census Bureau, Kansas gained 10,990 people and ranked 38th nationally in terms of population gain. The greatest population growth in the U.S. occurred in Florida, which gained 404,434 people during that same period. Texas ranked second with a gain of 388,419, and California ranked third with an increase of 290,109 people. In terms of percentage growth, Nevada outpaced the rest of the nation with a growth rate of 3.39 percent. Arizona was second with a growth rate of 3.35 percent, and Idaho was third with a rate of 2.37 percent. The growth rate for Kansas was 0.40 percent.

The West North Central (WNC) Region in the Midwest, which includes Kansas, grew at a slower rate (0.6 percent) than the nation as a whole (0.9 percent). The WNC region also includes Iowa, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota. Among the WNC states, Minnesota and Missouri realized the greatest growth rate (0.7 percent). These states were followed by South Dakota (0.7 percent), Nebraska (0.6 percent), Iowa, (0.5 percent), Kansas (0.4 percent), and North Dakota (less than 0.1 percent). The resident population for the U.S., national regions, states, and Kansas counties for 2000 through 2005 is shown in Appendix G.

The data used in this report are based on both full count census information and on estimates. Because both methods are presented, a brief discussion of each methodology follows.

U.S. Census Bureau's Methodology of Estimating State Populations

National population estimates are formulated by using the latest decennial census data as a benchmark and incorporating administrative data from federal agencies. Currently, the 2000 census serves as the benchmark. Each year following a decennial census, the benchmark is statistically adjusted using numerous variables, and a national estimate is reached. The next step is to formulate estimates for each state, county or parish, city, and township in the United States. All of these estimates sum to the national estimate, which is used as a control.

The annual estimates help identify population shifts, as well as trends and potential changes in some federal grants-in-aid formulas. The total state population and a state's proportion of the national total are factors in some formulas used to calculate federal grant-in-aid program allotments, including the Social Services Block Grant and the annual state private activity bond limitations. However, for most grant-in-aid programs, changes in population do not affect allocations directly.

Annual estimates in population change because of two factors: migration and natural growth. Migration refers to the net effect of migration into and out of each state. In 2005, there were 6,427 individuals who migrated into Kansas from another country. During

that same year, the internal, or state-to-state, migration for Kansas was -9,998. Natural growth refers to the additions to population from births and the subtractions from deaths. There were 39,140 births and 24,658 deaths in Kansas in 2005.

The variables used to produce population estimates are based on data series that capture both migration and natural growth. Variables include vital statistics, such as births and deaths, school statistics from state and parochial school systems, and data from federal income tax returns. Also incorporated into the estimates are data pertaining to housing permits issued, certificates of occupancy, and utility hookups. The latter three variables were included in the methodology beginning with the 1997 estimates. The inclusion of these variables is a significant change in the methodology because, prior to 1997, no housing variables were included. Analysis indicates the inclusion has improved the accuracy of the estimates.

The Census Bureau offers cautions about comparing decennial census numbers with intercensal model-based estimates. It is important to note that differences between decennial census estimates and model-based estimates are ambiguous estimates of changes in the levels of income or poverty at the county level. The ambiguity arises because these differences reflect both changes in the levels of income and poverty and differences in the methods by which the two cross-sectional estimates were made. For more information, see the Bureau's explanation at <http://www.census.gov/hhes/www/saipe/techdoc/centa ble.html>.

There is uncertainty associated with all estimates. For this reason, the Bureau quantifies the uncertainty through confidence intervals. A confidence interval is a range of values that describes the uncertainty surrounding an estimate. The Bureau indicates a confidence interval by its endpoints. For example, the 90.0 percent confidence interval for the number of people, of all ages, in poverty in the United States in 1995 based on the *March 1996 Current Population Survey* is "35,534,124 to 37,315,094."

A confidence interval is also itself an estimate. It is made using a model of how sampling, interviewing, measuring, and modeling contribute to uncertainty about the relation between the true value of the quantity that is being estimated and the estimate of that

value. How a confidence interval is interpreted is important. The “90.0 percent” in the confidence interval listed above represents a level of certainty about the estimate. If new estimates were made repeatedly using the same procedure, the confidence intervals would contain the average of all the estimates 90.0 percent of the time. This unknown average is treated as valid because the modeling procedure used by the Census Bureau is defined as the official measure, for example, of poverty. In these cases, the Bureau has produced a single estimate in a way that, if repeated indefinitely, would result in 90.0 percent of the confidence intervals formed containing the true value. The Census Bureau routinely employs 90.0 percent confidence intervals.

Confidence intervals are one way to represent how “good” an estimate is; the larger a 90.0 percent confidence interval for a particular estimate, the more caution is required when using the estimate. Confidence intervals are an important reminder of the limitations of the estimates.

The Decennial Census

Each decennial census yields a wealth of data that are important to a diversified user-group. The actual count for 2000 was completed on April 1, 2000, and is now the benchmark from which all population estimates are derived through 2009. The decennial census assists in determining how much money states will receive in a number of federal grant programs because several of the programs include population count as a component of their distribution formulas.

The electoral effects of the census are understood fairly well because of the effect on congressional seats. Less understood is the interaction between the population count and federal grant programs. The U.S. Supreme Court ruled that for the purposes of reapportioning seats in the House of Representatives, sampling techniques are prohibited. However, the ruling does not prohibit sampling from being used to allocate funds for federal formula grant programs.

According to the General Accounting Office, there are 22 large formula grant programs that rely in part on data derived from the decennial census. Medicaid is the largest program. The three large formula grant

programs that do not use census data are special education; the administrative portion of the nutrition program for women, infants, and children; and low-income home energy assistance.

Poverty

Important items that are determined from the decennial census are the poverty thresholds because they serve as a measure of need for a household. Poverty thresholds originated in 1964. The thresholds were derived using the U.S. Department of Agriculture’s food budgets, which were designed for families under economic stress. The thresholds also used other data relating to what portion of those families’ incomes was spent on food.

Although the methodology has evolved, poverty thresholds are still the dollar amounts used to determine poverty status. Currently, each person or family is assigned one out of 48 possible poverty thresholds. Thresholds vary according to the size of the family and the ages of the family members.

Although the thresholds in some sense reflect families’ needs, they are intended for use as a statistical yardstick, not as a complete description of what people and families need to live. The official measure of poverty was established by the Office of Management and Budget in Statistical Policy Directive 14 and is to be used by federal agencies in their statistical work.

Government aid programs are not required to use the official poverty measure as eligibility criteria. In fact, many government aid programs use a different poverty measure, such as the Department of Health and Human Services Poverty Guidelines or its variants.

Each aid program may define eligibility differently. However, the official poverty data come from the *Current Population Survey Annual Social and Economic Supplement*, which formerly was called the *Annual Demographic Supplement* or simply the “March Supplement.”

The same thresholds are used throughout the United States and do not vary geographically. In addition, the thresholds are updated annually for inflation using the Consumer Price Index for All Urban Consumers. Appendix H presents the poverty thresholds for 2005.

The thresholds are used by comparing total family “money” income with the established thresholds. For individuals who do not live with family members, their own income is compared with the appropriate threshold. If total family income equals or exceeds the threshold, the family (or unrelated individual) is not in poverty. If total family money income is less than the threshold appropriate for that family, the family is in poverty. If a family is determined to be in poverty, all family members have the same poverty status.

Income is the primary component used to compute poverty status. The official measure of income that is used by the U.S. Census Bureau is “money income.” It includes earnings; unemployment compensation; workers compensation; Social Security; Supplemental Security Income; public assistance; veterans payments; survivor benefits; pension or retirement income; interest; dividends; rents; royalties; income from estates; trusts; educational assistance; alimony; child support; assistance from outside the household; and other miscellaneous sources. Non-cash benefits, such as food stamps and housing subsidies, do not count. Income is the total of all these sources before taxes, and it excludes any capital gains or losses. The income of all family members is aggregated to determine the household income. The income earned by non-relatives living in the household, such as housemates, is not included in a household’s income.

For example, a family has five members, including two children, their mother, their father, and the children’s great-aunt. The appropriate threshold is \$23,108 for a five-member household with two related children under the age of 18. Assume that the family members’ income in 2004 was \$25,000, of which \$10,000 was earned by the mother, \$5,000 was earned by the father, and \$10,000 was earned by the great-aunt. Neither child earned any income. To determine this family’s poverty status, the family’s total income is compared with the family’s threshold. Because its income was greater than the threshold, this family is not “in poverty” according to the official definition.

Two other measures that are derived from these data are the Ratio of Income to Poverty and the Income Surplus/Deficit. The ratio is calculated by dividing the family’s total money income by the threshold. The example family’s ratio of income to poverty is 1.08. The difference in dollars between total family income and the family’s poverty threshold is called the Income Surplus/Deficit. For families in poverty, their income

is less than the threshold and it is called an “income deficit.” An “income surplus” occurs for families above poverty when its income is greater than the threshold. The example family’s income surplus was \$1,892 (\$25,000 minus \$23,108).

People whose poverty status cannot be determined are not included in any poverty statistics produced by the Census Bureau. Those not included are individuals living in institutional group quarters (such as prisons or nursing homes), college dormitories, military barracks, and living situations without conventional housing (and who are not in shelters). In addition, unrelated individuals under age 15, such as foster children, are not included. The reason for this exclusion is that income questions are asked of people only age 15 and older.

School District Populations

The school district estimates provided here are derived from the U.S. Census Bureau’s school district mapping project. The latest mapping project for which data are available was conducted at the same time as the 2000 Census. The school district boundary survey is conducted biennially. The survey used for this project asks each state’s Department of Education for a list of all school districts and their boundaries.

The population and poverty estimates for each estimate-year are produced for all school districts identified in the most recent boundary update. The boundary year does not always match the year to which the estimates refer. For example, the 2005 poverty estimates were produced for school districts in existence for the 2006-2007 school year. The Bureau uses the most current list of school districts and associated geography because it allows for efficient allocation of funds under the No Child Left Behind Act of 2001 for which the estimates are produced.

A listing of the population estimates for each school district in Kansas in 2003 is shown in Appendix I. This is the most recent year for which data are available. Also included in the appendix is the “head count,” or actual enrollment numbers, for 2003, which was provided by the Kansas Department of Education. It should be noted that the count from the Kansas Department of Education may not match the Census Bureau’s estimate. There are several reasons for the

difference, but the most significant is that the number of individuals who are in private or parochial schools and those who are home schooled are not included.

Health Insurance Coverage

The U.S. Census Bureau also provides statistics on health insurance coverage. The Bureau collects health insurance data using two national surveys, which are the *Current Population Survey (CPS)* and the *Survey of Income and Program Participation (SIPP)*.

The surveys differ in the length because of the detail of the questionnaire, the number of households interviewed, the methodology used to collect and process the data, and, consequently, in the health insurance coverage estimates that are produced. As a result, it is important to understand that different surveys and methods produce different results, and when it is appropriate to use each survey or method.

The CPS is useful mainly for examining timely estimates of the insured and uninsured population at the national level. The CPS also is useful as a source of estimates of the insured and uninsured populations at the state level. The SIPP is useful mainly for examining the dynamics of health insurance coverage as it changes over time.

The CPS is a monthly survey of approximately 50,000 households conducted by the Census Bureau for the Bureau of Labor Statistics, and the data are used primarily to estimate the unemployment rate. The *Annual Social & Economic Supplement (ASEC)* to the CPS, a survey of approximately 78,000 households, includes detailed health insurance questions asked of the household respondent for every household resident. Respondents are asked about health insurance coverage in the previous calendar year. The ASEC provides a consistent historical time series at the national level and can be used to examine state-level trends and differences by using multi-year averages. However, the large sampling errors of state-level data limit its usefulness.

The ASEC is perhaps the most widely used source of data on health insurance coverage in the United States and is the official source of estimates used to allocate

federal funding to states for the State Children's Health Insurance Program.

The ASEC provides reliable estimates of the net change in the number of uninsured people from one year to the next. However, it does not show how long a person remains uninsured, what percentage of the uninsured population remains uninsured in the following year, or how many people obtain coverage. Neither does it show any changes in a person's coverage within a given year.

These more dynamic measures of health insurance coverage are available from the SIPP. Unlike the ASEC, which is not designed to follow the same respondents in consecutive years, the SIPP is a longitudinal survey. This means that the SIPP interviews the same respondents three times a year over the course of three to four years.

Nationally, the number of people with health insurance coverage increased by 1.4 million in 2005 from 245.9 million to 247.3 million. The total number insured represents 84.1 percent of the total population. In Kansas, the number of people with health insurance increased by 33,000, which represents a 0.3 percent increase in the coverage rate. Appendix J shows the health insurance coverage status and type of coverage in the U.S. and Kansas from 1988 to 2005.

Demographics

Demographics are the components included in the population. The categories used by the U.S. Census Bureau include age, race, gender, and ethnicity. The demographic make up of Kansas is becoming more diverse. Historically, the population of Kansas has been predominantly of the White race and non-Hispanic in ethnicity. The same overall make up remains; however, the proportion of Hispanic ethnicity displays an upward trend.

Appendix K presents the dynamics between the decennial census in 2000 and the estimates for 2001 through 2005. Each category, including total population by age, race, gender, and ethnicity is shown. The table also shows each category as a percent of the relevant total population.

Age

This report identifies five age categories, including under 5 years of age, 5 to 19 years of age, 20 to 64 years of age, 65 years of age and older, and 85 years of age and older. It should be noted the category of 85 years of age and older is a subcategory of 65 years of age and older.

Analysis indicates the population of Kansas is aging, but at a slower pace than the rest of the United States. As of July 1, 2005, there were 2,744,687 people in Kansas with a median age of 36.1 years, which is only slightly younger than the national median age of 36.4 years. In addition, when the trends for age are examined, most notably, the population of school age children has seen the most significant decrease since 2000, while the older cohorts remain relatively constant.

Included in the 2005 total are 187,949 people who are less than 5 years of age. This category has remained virtually unchanged since 2000. Proportionally, this cohort represents 6.8 percent of the total state population and is down only 0.1 percent from last year. In 2000, this cohort represented 7.0 percent of the total state population.

The population of school age children 5 to 19 years of age totaled 569,356 in 2005. This is a 10,307-person decrease, or -1.8 percent, since 2004 and a 40,354-person decrease, or -7.1 percent, since 2000. Proportionally, this cohort represents 20.7 percent of the total state population. In 2004, it represented 21.2 percent of the total state population. In 2000, it represented 22.7 percent.

In 2005, the population from 20 to 64 years of age was 1,630,377 and represented 59.4 percent of the total state population. Last year it represented 58.9 percent and in 2000, it represented 57.1 percent. This cohort increased by 20,104, or 1.2 percent, since last year and by 96,606, or 5.9 percent, since 2000.

In 2000, the estimated population of Kansans who were 65 years of age and older was 356,229. In 2005, that number was 357,005, which is an increase of 0.2 percent from the 2000 level and a 0.5 percent increase over last year. This cohort represents 13.0 percent of Kansas' total population in 2005. During that same

year, there were 34.8 million people over the age of 65 in the nation.

The elderly are generally considered to be those who are 85 years of age or older. In 2000, there was an estimated 4.2 million individuals over the age of 85 in the U.S., representing 12.4 percent of the total U.S. population. During that same year in Kansas, 51,770 individuals were over the age of 85, which represented 1.9 percent of the total state population. In 2005, there were 57,665 individuals who were 85 years of age and older in Kansas. This age cohort realized an increase of 1,867, or 3.2 percent, since 2004 and 5,895, or 10.2 percent, since 2000.

Race

Race and Hispanic origin are distinctly different concepts. The concept of race as used by the Census Bureau is one of self-identification and is directly correlated to the race or races with which people most closely identify. These categories are socio-political constructs and should not be interpreted as being scientific or anthropological in nature. In addition, the Census Bureau's race categories include both racial and national-origin groups.

The racial classifications used by the Census Bureau are also used in this report and adhere to the October 30, 1997 *Federal Register* notice entitled "Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity." This report was issued by the Office of Management and Budget. It is important to remember that the data gathered on race in Census 2000 are completely different from previous censuses. Direct comparisons cannot be made. The racial classifications used are:

White. A person having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicate their race as "white" or report entries such as Irish, German, Italian, Lebanese, Near Easterner, Arab, or Polish.

Black or African American. A person having origins in any of the black racial groups of Africa. It includes people who indicate their race as "Black, African American, or Negro" or provide written entries such as African American, Afro-American, Kenyan, Nigerian, or Haitian.

American Indian & Alaska Native. This category includes those who have origins in any of the original peoples of North and South America (including Central America) and who maintain an attachment to their community or tribe.

Asian. A person would choose this category if his or her origins are in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam. This category includes those who self-identify as Asian Indian, Chinese, Filipino, Korean, Japanese, Vietnamese, and Other Asian.

Native Hawaiian & Other Pacific Islander. This category includes those who have origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific islands. It includes people who indicate their race as Native Hawaiian, Guamanian or Chamorro, Samoan, and Other Pacific Islander.

Some Other Race. This category includes all other responses that are not included in one of the categories listed above. Respondents providing write-in entries such as multiracial, mixed, interracial, Wesort, or a Hispanic/Latino group (for example, Mexican, Puerto Rican, or Cuban) also are included here.

Two or More Races. This category encompasses the responses where individuals chose to self-identify with two or more races by checking two or more race response check boxes, by providing multiple write-in responses, or by some combination of the two.

Between 2000 and 2004, the demographic makeup by race and by age has remained relatively stable with only minor shifts. In 2005, 89.4 percent of the population self-identified as white alone, while 5.9 percent self-identified as black alone, and 0.9 percent as American Indian or Alaska Native alone. Only 2.1 percent self-identified as Asian alone; only 0.1 percent self-identified as Native Hawaiian and other Pacific Islander alone; and 1.6 percent self-identified as two or more races. The only changes occurring in those categories since 2000 were a 0.4 percent decrease in those self-identifying as white alone; a 0.3 percent increase in those self-identifying as Asian alone; and a 0.1 percent increase in those self-identifying as two or more races.

Gender

This category is determined by self-classification based on gender as either male or female. In 2004, the total Kansas population consisted of 1,363,613 males and 1,381,074 females, which is a ratio of 0.98 male to 1.00 female. This ratio also was 0.98:1.00 in 2000. The chronology of data indicates there were more males than females from birth through middle age. By 65 years of age, the number of females is greater than the number of males, with the ratio increasing as the population ages. The percentage breakdown and ratio in each age cohort have remained relatively constant from 2000 through 2005. The 65 years of age and older category is the first to show more females than males. For the population that is 85 years of age and older, the difference between males and females is even more marked.

Ethnicity

The U.S. Bureau of the Census categorizes ethnicity as either Hispanic or non-Hispanic. People who identify with the terms “Hispanic” or “Latino” are those who classify themselves in one of the specific Hispanic or Latino categories—Mexican, Puerto Rican, or Cuban—as well as those who indicate that they are “other Spanish, Hispanic, or Latino.” Interestingly, origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person’s parents or ancestors before their arrival in the United States. Those individuals who self-identify their origin as Spanish, Hispanic, or Latino may be of any race.

In 2005, there were 228,250 Hispanic individuals in Kansas, which represented 8.3 percent of the total population. In 2000, there were 188,252 Hispanic individuals in Kansas, which was 7.0 percent of the total population. All age cohorts show the same relative increase from 2000 through 2005.

Kansas Population Projections

In Kansas, population estimates and projections are widely used by state agencies, local governments, and individuals. The variety of uses includes a diversified

user base that includes all levels of government, the media, businesses, special interest groups, and individuals.

By state statute, on July 1 of each year Kansas certifies as the official state population the U.S. Census Bureau's most recent population estimates for sub-county areas. Unlike the annual certification, the state's population projections are not required to be produced each year. As a general rule, the Kansas Division of the Budget publishes updated population projections every three to five years.

Since the 2000 Census, the projections have been updated twice. The first set was produced in 2002. The most recent set was produced in November 2006 when the Kansas Division of the Budget contracted with Moody's Economy.com to produce population projections, which allows Kansas to fulfill its obligation to provide timely, accurate, and useful data. An advantage of contracting out is that an independent method provides valuable feedback to the U.S. Census Bureau. Appendix L shows the population projections for Kansas and all counties, by age, for 2007 through 2018.

Appendix H

Poverty Thresholds in 2005, by Size of Family & Number of Related Children under 18 Years

Size of Family Unit	Related Children under 18 Years									
	None	One	Two	Three	Four	Five	Six	Seven	Eight or More	
One person										
Under 65 Years	\$10,160									
65 Years and Over	9,367									
Two People										
Two with Householder:										
Under 65 Years	13,078	\$13,461								
65 Years and Over	11,805	13,410								
Three People	15,277	15,720	\$15,735							
Four People	20,144	20,474	19,806	\$19,874						
Five People	24,293	24,646	23,891	23,307	\$22,951					
Six People	27,941	28,052	27,474	26,920	26,096	\$25,608				
Seven People	32,150	32,350	31,658	31,176	30,277	29,229	\$28,079			
Eight People	35,957	36,274	35,621	35,049	34,237	33,207	32,135	\$31,862		
Nine People or More	43,254	43,463	42,885	42,400	41,603	40,507	39,515	39,270	\$37,757

¹ Implementation of a 28,000 household sample expansion.

² Estimates reflect the results of follow-up verification questions and of Census 2000 based population controls.

³ Beginning with the March 1998 CPS, people with no coverage other than access to Indian Health Service are no longer considered to be uninsured. The effect of this change on the overall estimates of health insurance coverage is negligible; however, the decrease in the number of people covered by Medicaid may be partially due to this change.

⁴ Health insurance questions were redesigned. Increases in estimates of employment-based and military health care coverage may be partially due to questionnaire changes. Overall coverage estimates were not affected.

⁵ Data collection method changed for paper and pencil to computer-assisted interviewing.

⁶ Implementation of Census 1990 based population controls.

⁷ Figures are revised to correct for omitted weights from the original March 1992 CPS file.
